

KSCF (FM)  
FCC 302 RF Hazard Exhibit  
CP Special Condition #3

Construction Permit BPH-20060619AAP Special Condition # 3 requires that upon completion of construction radio frequency electromagnetic field strength measurements be taken thorough out the transmitter site area to insure compliance with the FCC guidelines (OET Bulletin No. 65, Edition 97-01, August 1997) with regard to human exposure to RF fields.

Proper radio frequency measurements were taken that show that the maximum exposure level for ground-level areas accessible to the public was 55% of the standard. The maximum occupational exposure for fenced in areas not accessible to the general public is 62% of the standard.

The fenced in areas have signs as appropriate to warn the public of excessive exposure areas.
