Re: Directional FM Antenna for WFCM-FM -- Murfreesboro, TN

Before the Commission:

I certify that the above captioned antenna as shown on the ERI drawings has been mounted and oriented in accordance with the ERI instructions, and the eastern antenna panel is oriented at 04 degrees true North. This azimuth was established from the Tennessee Department of Transportation monuments.

We've been providing surveying services in Tennessee since 1965. Our firm checked the location of the tower, guy wires and the direction of the antenna on November 15, 2005.

Sincerely,

Steve Northcutt, RLS # 1721
