APPLICATION FOR MODIFICATION OF  
DTV LICENSED FACILITY  
FCC FILE NO. BLCDT-20021015ABV  
STATION WMFD-DT  
FACILITY ID 41893  
MANSFIELD, OHIO  
CH 12      13 KW (MAX-DA)      180 M

Technical Narrative

This technical exhibit was prepared on behalf of Mid-State Television, Inc. in support of an application for modification of the licensed facility for WMFD-DT at Mansfield, Ohio. Station WMFD-DT is presently licensed (BLCDT-20021015ABV, Facility ID 41893) to operate on channel 12 (204-210 MHz) with a directional antenna maximum effective radiated power (ERP) of 4.8 kilowatts (kW) and an antenna radiation center height above average terrain (HAAT) of 161 meters.

Specifically, WMFD-DT proposes to operate on DTV channel 12 from its existing tower located at N40°45'50", W82°37'04". The antenna structure registration number is 1013230. It is proposed to operate with a directional DTV antenna system maximum ERP of 13 kW and an HAAT of 180 meters. An Andrew type ATW6V3-CSOC-12 circularly polarized directional antenna will be side-mounted at the 137 meter level on the existing tower. Figure 1 provides the horizontal and vertical plane radiation patterns for the proposed Andrew type ATW6V3-HSOC-12, circularly polarized, directional antenna system.

Response to Paragraph 11 - NTSC/DTV Allocation Considerations

Figure 2 is the separation study for DTV channel 12 from the proposed WMFD-DT site. The study has been used to determine the assignments requiring interference studies using the procedures outlined in the FCC's OET-69 bulletin. Interference calculations for the proposed WMFD-DT DTV operation are summarized below.

An interference analysis has been conducted using the procedures outlined in the FCC's OET-69 bulletin which

# ***du Treil, Lundin & Rackley, Inc.***

Page 2

Mansfield, Ohio

demonstrates that the proposal complies with the interference protection provisions of Section 73.623(c)(2).<sup>1</sup> Interference calculations for the proposed WMFD-DT DTV operation are summarized below. It is noted that the summary only includes stations with which interference (masked or unmasked) is calculated.

| Protected NTSC/DIV Station                        | FCC Service Population | Current Interference | Proposed Unique Interference Population* |

\*Considers interference "masking" from other NTSC and DTV assignments.

From the above, it is apparent that the proposed WMFD-DT DTV operation on channel 12 complies with the FCC's 2%/10% interference standard towards all authorized NTSC (analog) and DTV assignments.

---

<sup>1</sup> The du Treil, Lundin & Rackley, Inc. DTV interference analysis program is based on the program and procedures outlined by the FCC in the Sixth Report and Order; subsequent Memorandum Opinion and Order; and FCC OET Bulletin No. 69. A nominal grid size resolution of 2 km was employed. A Sun based processor computer system was employed. The results have been found to be in very close agreement with the results of the FCC implementation of OET Bulletin No. 69.

## Class A Allocation Considerations

A study has been conducted which indicates that the WMFD-DT proposal will not create prohibited interference to existing, authorized or proposed Class A stations.

## Response to Paragraph 12 - City Coverage

Figure 3 is a map showing the predicted 43 dBu and 36 dBu, F(50,90), coverage contours. The Mansfield city limits were derived from information contained in the 2000 U.S. Census for Ohio. As indicated, all of Mansfield is located within the proposed 43 dBu contour. The distances to the predicted contours were determined in accordance with the provisions of Section 73.625. The average elevations from 3.2 to 16.1 kilometers from the transmitter site, were obtained from the NGDC 30-second terrain database and were used for determining the distances to coverage contours.

## US-Canadian LOU Compliance

The proposed transmitter site is located 101.9 kilometers from the closest point of the US/Canadian border. Hence, coordination of the proposed WMFD-DT operation on channel 12 with Canada will be necessary. It is noted that the proposed WMFD-DT operation complies with the requirements of the distance tables in Appendix 2 of the Letter of Understanding (LOU) between the FCC and Industry Canada.<sup>2</sup>

## Objectable Interference

Station WRGM (AM) is the only known authorized full service AM facility operating within 5 kilometers (3 miles) of WMFD-DT proposed transmitter site. Figure 4 provides a tabulation of all known authorized full service FM and TV stations within 16 kilometers (10 miles) of the proposed site. Although no adverse electromagnetic impact is expected, the

Page 4

Mansfield, Ohio

applicant recognizes its responsibility to correct problems, which are a result of its proposed operation.

The existing site is more than 2084 kilometers from the closest point of the Mexican border. The closest FCC monitoring station is located at Allegan, MI more than 344 kilometers to the northwest. The closest point of the National Radio Quiet Zone (VA/WV) is more than 246 kilometers to the southeast. The closest point of the Table Mountain Radio Quiet Zone (CO) is more than 1908 kilometers to the west. The closest radio astronomy site operating on TV channel 37 is at Green Bank, West Virginia, located more than 351 kilometers to the southeast. It is believed that these separations are sufficient to not be a concern for coordination purposes.

## Response to Paragraph 13 - Environmental Protection Act

The proposed facilities were evaluated in terms of potential radio frequency (RF) energy exposure at ground level to workers and the general public. The radiation center for the proposed DTV antenna is located 137 meters above ground level. The maximum DTV ERP is 26 kW (H+V, circular polarization). As shown on Sheet 4 of Figure 1, the vertical plane relative field values for the proposed antenna do not exceed 0.2 towards the tower base (-60° to -90° elevation). Therefore, presuming a "worst case" vertical plane relative field value of 0.2 for angles towards the tower base, the calculated power density at a point 2 meters above ground level is 0.0019 mW/cm<sup>2</sup>. This is 0.95% of the FCC's recommended limit of 0.2 mW/cm<sup>2</sup> for DTV channel 12 for an "uncontrolled" environment. Therefore, based on the responsibility threshold of 5%, the proposal will comply with the RF emission rules.

Access to the transmitting site will be restricted and appropriately marked with warning signs. Furthermore, as this is a multi-user site, an agreement will be in effect with the other stations in the event that workers or other authorized personnel enter the restricted area or climb the tower to ensure that appropriate measures will be taken to assure worker safety with respect to radio frequency radiation exposure. Such measures include reducing the average exposure by spreading out the work over a longer period of time, wearing "accepted" RFR

protective clothing or scheduling work when the stations are at reduced power or shut down.

Finally, it is noted that this technical exhibit only addresses the potential for radiofrequency electromagnetic field exposure. All other aspects of the environmental processing analysis will be or already has been provided to the FCC by the tower owner as part of the tower registration process.

If there are questions concerning the technical portion of this application, please contact the office of the undersigned.
