**EXHIBIT C**

**Interference Study for W235CH**  
**Using Proposed Site as Reference**

The proposed W235CH, operating with an effective radiated power of 0.099 kilowatt, will not cause interference to any existing, applied for or proposed facility. As noted on Exhibit C1, the proposed W235CH is within the predicted 60 dBu contour of third adjacent station WWNQ, Channel 232A, Forest Acres, South Carolina, as well as within the predicted 60 dBu contour of both the licensed and construction permitted second adjacent station WFMV, Channel 237A, South Congaree, South Carolina. Due to the relationship between the proposed W235CH and both WWNQ and WFMV, a 40 db ratio of the protected and interfering contours applies. The proposed W235CH antenna will be mounted on a building and tower combination registered with the FCC and assigned Antenna Structure Registration Number 1052473. The building proper is 107.3 meters (352 feet) above ground level ("AGL") with a top mounted structure of 23.2 meters (76 feet). The building is 26 floors, and the top floor is restricted to maintenance personnel only. All interference calculations consider the 25<sup>th</sup> floor, which is 34.7 meters (113.8 feet) below the proposed center of radiation for W235CH, as a base for public access . It is proposed to utilize a Shively 6832 four (4) bay half wavelength antenna. A tabulation of the elevation pattern of this antenna is included as Exhibit C2.

### **W235CH vs WWNQ**

The proposed W235CH antenna will be located on the same building as the WWNQ facility. The WWNQ contour at the W235CH antenna site is in excess of 120.0 dBu (50/50). The corresponding interfering contour for W235CH is 160.0 dBu (50/10). At its greatest distance, the interfering contour (160 dBu, FCC 50/10) of W235CH extends less than 10.0 meters (32.8 feet) from the proposed W235CH site, as indicated on Exhibit C7. Since the W235CH antenna will be mounted at 37.4 meters (113.8 feet) above any occupied building floor and there are no structures of comparable height in the vicinity of the proposed W235CH antenna, this contour never reaches any potentially occupied space. As such, WWNQ will not receive interference from the proposed translator.

### **W235CH vs WFMV (License)**

The proposed W235CH antenna will be located 20.85 kilometers from the WFMV licensed facility. As shown on Exhibit C3, the WFMV signal at the W235CH antenna site is 68.7 dBu (FCC 50/50). The corresponding interfering contour for W235CH is 108.7 dBu (50/10). Since the W235CH antenna will be mounted at 37.4 meters (113.8 feet) above any occupied building floor and there are no structures of comparable height in the vicinity of the proposed W235CH antenna, this contour never reaches any potentially occupied space. A tabulation of the interference analysis is included as Exhibit C4. As such, the licensed WFMV will not receive interference from the proposed translator.

**W235CH vs WFMV (Construction Permit)**

The proposed W235CH antenna will be located 20.85 kilometers from the WFMV construction permitted facility. As shown on Exhibit C5, the WFMV signal at the W235CH antenna site is 68.7 dBu (FCC 50/50). The corresponding interfering contour for W235CH is 108.7 dBu (50/10). Since the W235CH antenna will be mounted at 37.4 meters (113.8 feet) above any occupied building floor and there are no structures of comparable height in the vicinity of the proposed W235CH antenna, this contour never reaches any potentially occupied space. A tabulation of the interference analysis is included as Exhibit C6. As such, permitted WFMV will not receive interference from the proposed translator.

Based on the foregoing, it is believed that the proposed W235CH is in compliance with §74.1204(d) of the Commission's rules. If a waiver of the rule is needed to address WFMV, one is respectfully requested.
