

## ADJACENT CHANNEL WAIVER REQUEST

The proposed facility is 0.0 kilometers from, and therefore co-located with adjacent channel, low power station K05JY (channel 05). K05JY operates with an ERP of 0.349 kW, while the instant proposal is for channel 06 at a maximum ERP of 3 kW. Thus, K06MB will operate in the worse case 9.34 db relative to K05JY. Further more, K06MB is directionalized towards Indio (the same city K05JY SERVES) with a narrower pattern than K05JY. Thus, this D/U will be maintained everywhere in K06MB's protected service area. In light of this signal level relationship, no interference will be caused to K05JY by a grant of the requested minor modification.
