August 11, 2009

In evaluating the proposed conversion to digital for K32ET, FID 475, an outgoing interference study was executed. It was discovered that according to Longly-Rice methods approved by the OET, that K20EN (channel 32) FID 8302 would receive lethal interference if K32ET were to continue operation on channel 32. After thorough searching, channel 21(T) was found to cause no lethal levels of interference to other stations. Thus, Three Angels Broadcasting Network respectfully requests that the Commission look favorably on this application.
