Exhibit 12 (Compliance with CFR 74.1204)

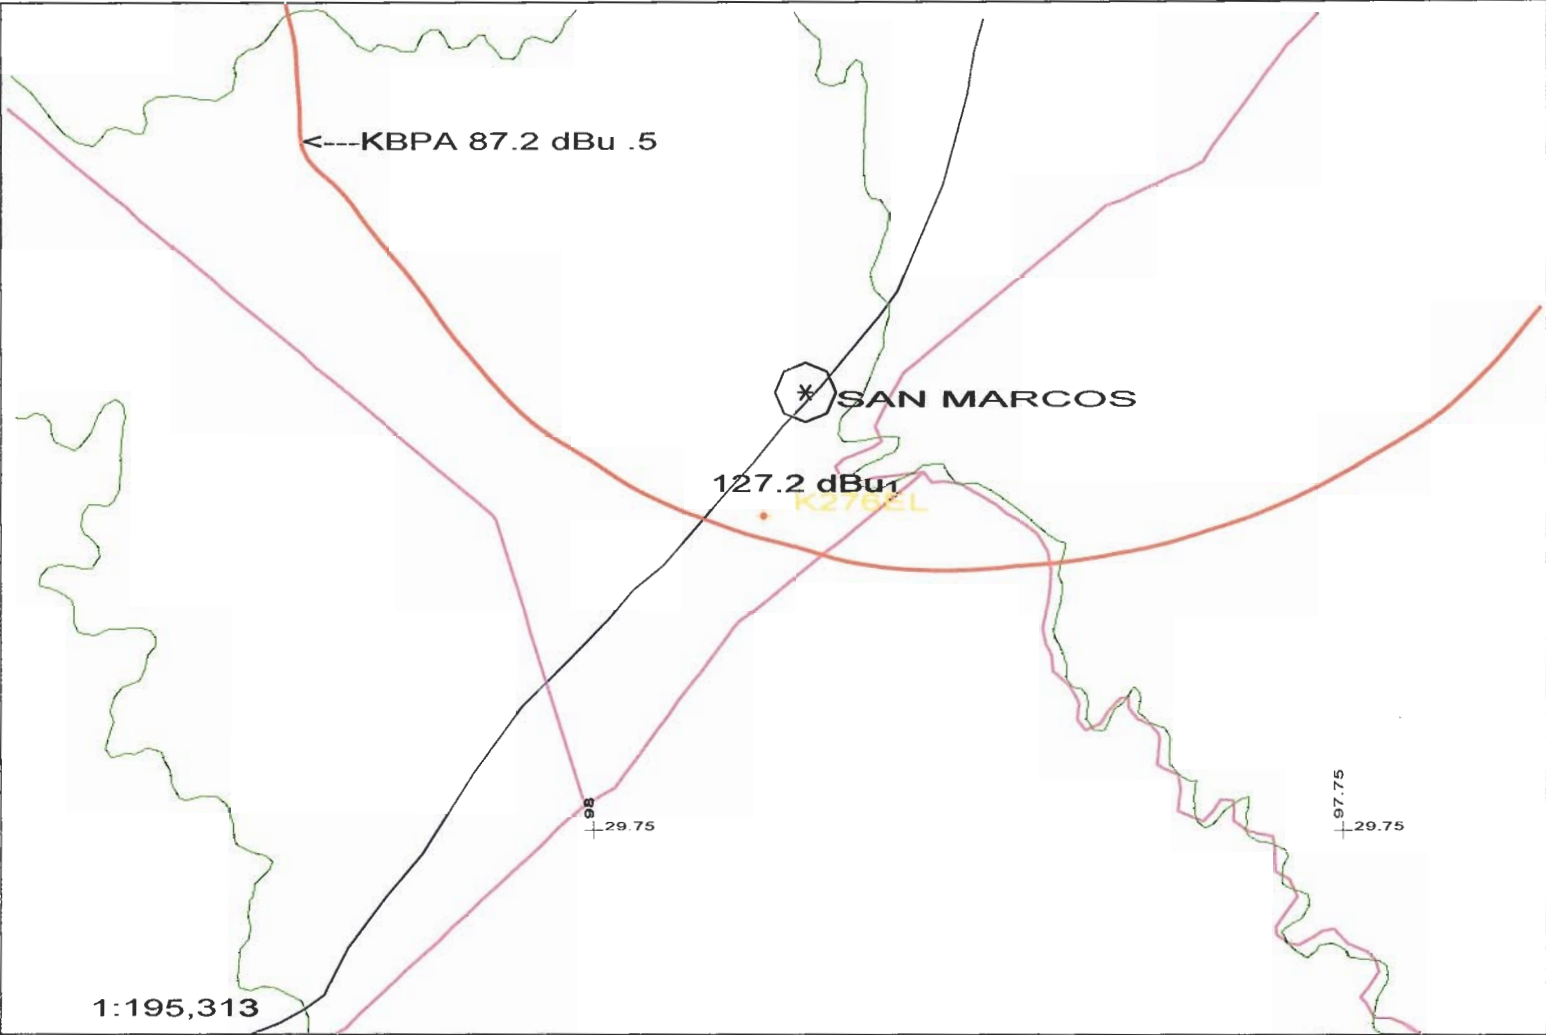

The proposed FM Translator is located within the protected 60 dBu contour of second adjacent channel station KBPA, channel 278C, San Marcos, TX. The predicted F(50-50) field strength of KBPA at the proposed translator site is 87.2 dBu, see Exhibit 12A. Therefore, the respective predicted interfering contour generated by the proposed FM Translator is 127.2.dBu. This interfering contour extends less than 48 meters from the proposed transmit antenna, and the area of overlap is unpopulated.

Two factors have been investigated to determine this absence of population:

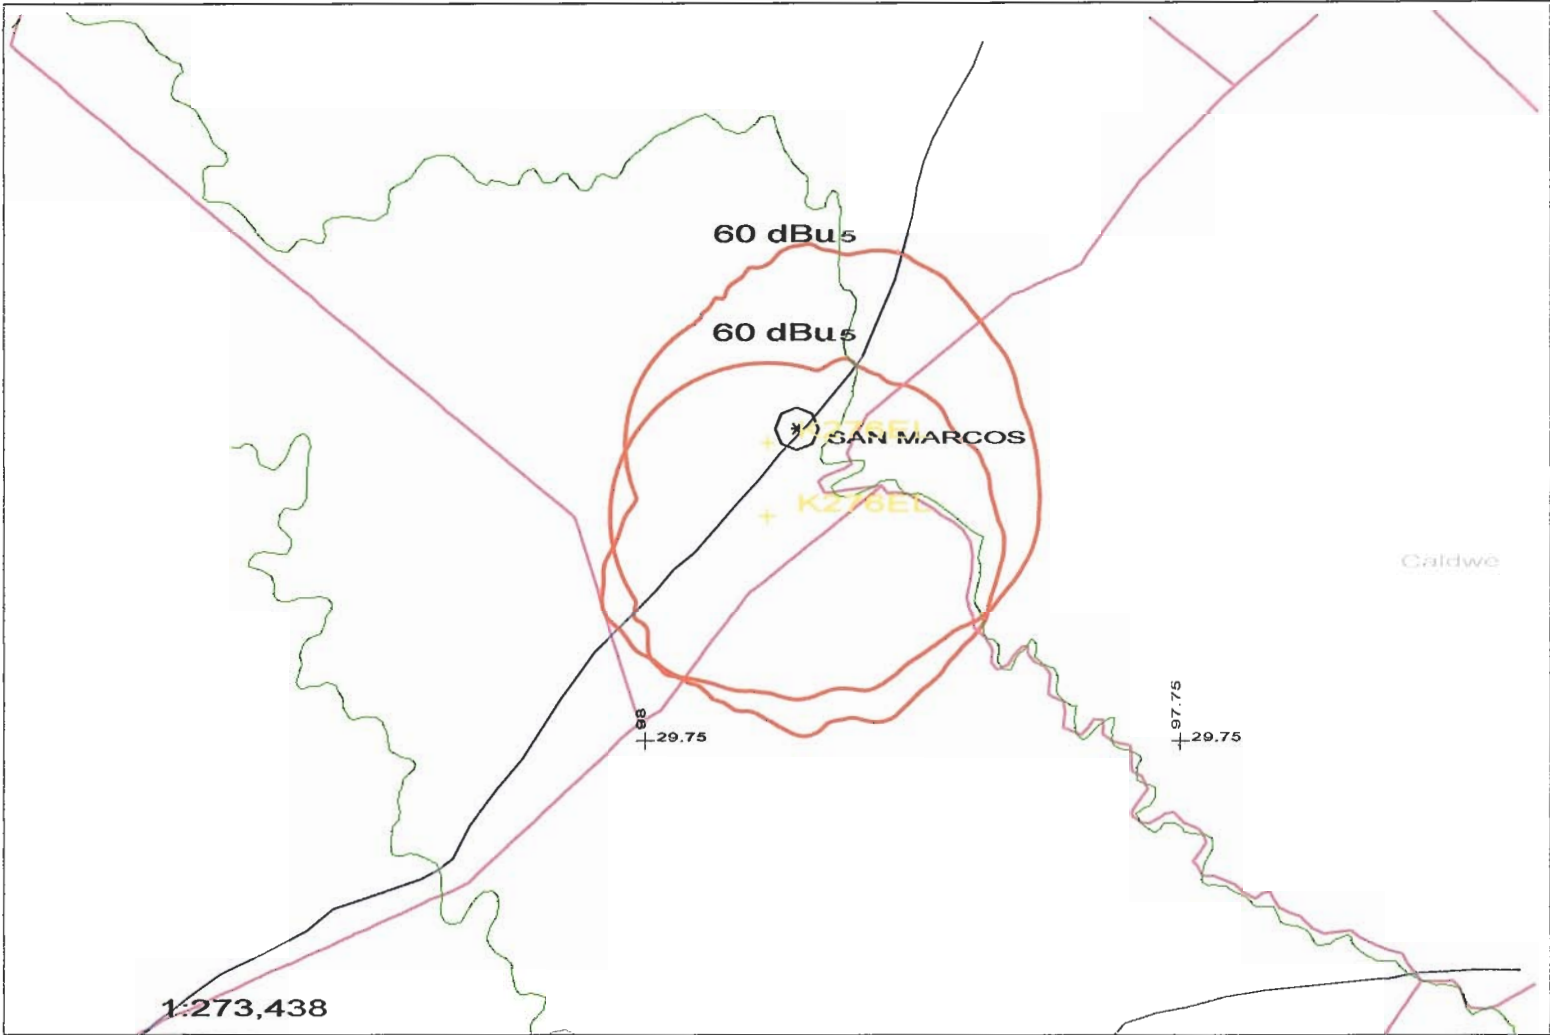

1) Computer software which uses the centroid method of determining population centers, based on the 2000 census data, has determined that there are no persons within the area of overlap.

2) Examination of the USGS topographic map reveals no regularly occupied structures within the area of overlap.

Therefore, EMF respectfully requests a waiver of C.F.R. 74.1204 based on no population within the area of predicted interference.
