July 17, 2017

Black Media Works, Inc.  
Radio Station WJFP  
1150 W. King Street  
Cocoa, Florida

On July 17, 2017, I visited the WJFP(FM) tower site in order to conduct a survey to determine if the RF plant complies with safe RF radiation standards as outlined in OET Bulletin 65 as updated. I have evaluated the station using measurements made at the site, including inside the building, outside the building, at the tower fence perimeters and the surrounding area.

Measurements were made using a Holaday HI-3002 Broadband Exposure Meter and the proper E-field and H-field probes. WIRA, WJFP and W236AO were operating with their authorized power and are the only stations at the site.

The only area of excess exposure is within the fenced area that surrounds the tower. The appropriate warning signs are posted on the tower fences and at the building. Operation of the stations should be terminated if someone needs to climb the tower.

Sincerely

James M. Johnson
