Steve,

I am writing in reference to the KOEA Radio Tower in Ripley County. At the beginning of the project the survey crew located the tower and the guy anchors. This information was then placed on a drawing with the bearings of each anchor labeled in relation to True North so that the new antenna could be constructed as shown on the survey dated 07-23-10.

On 11-09-10 the survey crew revisited the site and located two points on the new antenna as directed by Palmer Johnson. The crew found that the new antenna was facing $N00^{\circ}52'56''E$ which was in accordance with the construction requirements of being within one degree or less of true North. If you should have any questions please contact me or Ty Milner at our office.

Sincerely,

Grady Robinett, LSIT
Survey Manager
