

Dielectric

A Unit of SPX Corporation

PATTERN CERTIFICATION

Method of Measurement

The azimuth pattern developed for KBRQ was optimized in the following manner.

A single model of the SKM radiator at a scale of 4.4:1 was mounted on a similarly scaled model of the tower according to information provided to Dielectric by the station. Both the horizontal and vertical polarization azimuth patterns were measured in a anechoic test range. Spacing and location of the radiator off the tower in conjunction with parasitic elements were used to optimize the azimuth pattern.

STATEMENT OF QUALIFICATIONS

Henry Downs received a B.Sc. in Electrical Engineering from the Heriot Watt University in Scotland in 1981 and a Masters Degree in Microwave Engineering in 1985. He has over 15 years of experience in R.F. engineering and broadcast technology and has been employed by Dielectric Communications since early 1998.
