Page #1, Waiver Request of Section 74.1204

K204DJ, Yankee Hill, CA 10Watts ERP
Calvary Chapel of Twin Falls, Inc. 12/02

The proposed site is contained entirely inside the service contour of second-adjacent Station KRCX, Marysville, CA

KRCX.LIC

The proposed site is contained entirely inside the service contour of second-adjacent Station KRCX, Channel 260, Class B, 1.75 kW, Marysville, CA. As shown by the map on **page #2** of this waiver request, the level of the second-adjacent station KRCX arriving protected F(50,50) signal at the proposed transmitter site is 64-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to KRCX is 98-dBu (free-space contour method employed). This means that the 98-dBu interfering signal would, in the worst case at the maximum radial, extend 284 meters, or .284 km from the base of the tower. A TOPO Map Exhibit has been submitted with this application showing that no buildings/residences are within this 284 meter, 98-dBu interference contour. Since no population inhabits this 98-dBu interfering area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent channel station KRCX.
