

**EXHIBIT 28 Environmental**  
WPEG FCC 302 Application  
October 24, 2012  
CBS Radio Holdings Inc.

An Environmental Assessment is not required, as grant of this application would not be considered a major environmental action.

The proposed replacement transmitting antenna, an ERI model 1014-4CP-DA will be mounted on a tower that has been registered with the Commission. The center of radiation is 483 meters above ground. The ERP is 95 kW H and 71.7 kW V.

The proposed transmitting facilities will comply with the FCC guidelines limiting human exposure to radio frequency energy. The maximum power density level at any location at ground level, calculated in accordance with OET Bulletin No. 65 (August 1997), would be less than 5% of the applicable limit for exposures of unlimited duration. Accordingly, the proposed facility is categorically excluded by FCC Rules from having to consider the contributions of other stations at the site. If work is done on the tower in an area where over exposure could occur, the Licensee in coordination with the other users will take necessary action to prevent the overexposure of workers on the tower including reducing the transmitting power or ceasing operation completely.
