**Interference Area**  
**Fairbanks, TX**

The Proposed translator is within the 60 dBμ contour of upper second adjacent station KODA channel 256. The KODA contour at the translator site is 87 dBμ F(50,50). Using the ratio of 100:1 (translator to KODA) on the second adjacent channel, the population within the proposed translator 127 dBμ F(50,10) is zero. Using the free space equation, the predicted interference area is expected to extend 27 meters from the antenna. The antenna is 38 meters above ground level, thus the interference area will never reach the ground. There are no structures or elevated roadways within the 11 meter interference area of the translator.

Therefore, the application is in compliance with the following: §74.1204 (d) "The provisions of this section concerning prohibited overlap will not apply where the area of such overlap lies entirely over water. In addition, an application otherwise precluded by this section will be accepted if it can be demonstrated that no actual interference will occur due to intervening terrain, lack of population or such other factors as may be applicable."
