

Exhibit VII.13e.1

Overview of Channel 6 Study

There is one Channel 6 station within the threshold distance of 196 km, KWNB-TV6, Hayes Center Nebraska. The interference contour of the proposed FM assuming a circular pattern (5.125 kW at 73.3 dBu, F(50,10)) and KWNB-TV6 (47 dBu) is shown in Exhibit VII.13e.2. There is no prohibited interference with KWNB-TV6. Therefore the proposed station is in full compliance with commission guidelines.

However, out of an abundance of caution and in deference to channel 6 listeners in the rural communities to the east of the proposed FM, the applicant proposed to utilize only vertical polarization, adding to the protection of potential channel 6 listeners in the area.
