Re: WGLE antenna replacement

To whom it may concern:

This is to confirm the proper installation of the replacement directional antenna system at the WGLE transmitter site in Cridersville Ohio. The antenna is the same type, FMD-3B manufactured by ERI, as the previous antenna and is certified by the manufacturer to have identical performance to the previous antenna. The antenna was installed by the manufacturer. The crew from the manufacturer reported no problems in this installation. An accompanying surveyor's statement certifies the proper azimuth orientation. I therefore certify that to the best of my knowledge the antenna was properly installed.
