

ENGINEERING STATEMENT

The engineering data contained herein have been prepared on behalf of SUNSHINE BROADCASTING COMPANY, INC., licensee of Class-A television station WARP-CA, Channel 20 in Tampa, Florida, in support of this Application for Construction Permit to specify an increase in effective radiated power at the licensed site.

The licensed Andrew directional antenna is mounted at the 140-meter level of an existing 196-meter communications tower. Exhibit B is a map upon which the predicted service contours are plotted. It is important to note that the newly proposed 74 dBu contour encompasses a significant portion of that which obtains from the licensed WARP-CA facility. Operating parameters for the proposed facility are tabulated in Exhibit C. A contour overlap analysis and interference study are provided in Exhibit D, and a power density calculation follows as Exhibit E.

Because no change in the overall height or location of the existing tower is proposed, the FAA has not been notified of this application. The FCC issued Antenna Structure Registration Number 1020779 to this tower.

I declare under penalty of perjury that the foregoing statements and the attached exhibits, which were prepared by me or under my immediate supervision, are true and correct to the best of my knowledge and belief.
