PATTERN CERTIFICATION
DIRECTIONAL FM ANTENNA
KKML
February 9, 2018

Call Sign	:	KKML
Location	:	Minden, LA
Frequency	:	90.9 MHz
Channel	:	215A
Antenna Model	:	FM3/1-DA
Maximum Antenna Gain	:	
Horizontal	:	0.958 / -0.185 dB
Vertical	:	0.958 / -0.185 dB

ANTENNA DESCRIPTION

A custom designed FM3/1-DA antenna was fabricated to conform to the prescribed directional azimuth pattern. The antenna consists of one (1) circularly polarized, cross-V dipole radiating element mounted to a 2" (inch) schedule 40 support pole. The support pole is mounted to a 42" (inch) face tower. The antenna points 350 degrees true north.

DESCRIPTION OF TEST PROCEDURE

The test antenna consisted of a single third-scale bay. The antenna was mounted to a third-scale pipe, which was mounted to a third-scale pole by use of third-scale brackets identical to those shipped with the final, full-scale antenna. For testing, the entire third-scale model was then mounted atop a 20' (foot) high platform, and all feed cables were properly grounded. Horizontal and vertical readings were taken. The desired directional pattern was obtained by adjusting the distance between the tower and the antenna, and modifying the direction of the azimuth heading.

DESCRIPTION OF TEST PARAMETERS AND EQUIPMENT

Horizontal and vertical pattern readings were taken by mounting a source antenna - a vertical/horizontal dipole, Cavity Back Resonator (CBR) antenna bay - approximately 100' (feet) from the third-scale antenna model. The source antenna's height was adjusted to achieve a uniform field at the third-scale test antenna location. The CBR antenna was operated in receive mode, at frequency 272.7 MHz. The third-scale test antenna was then rotated clockwise in order to achieve 360° (degree) pattern readings. A gain reference was taken using a dipole tuned to 272.7 MHz. Nowhere did the received signal, or resultant documentation, exceed a maximum to minimum ratio of 15dB (decibels).

TEST RESULTS

The attached calculations verify that the **RMS** value of this antenna is **90.2%** of the **RMS** value of the pattern authorized in the related FCC file **BNPED-20071015AFG**. The vertical component **RMS** value is **0.681**. The horizontal component **RMS** value is **0.676**. The circular polarized component **RMS** value is **0.755**.

Azimuth and elevation plots and associated tabulations of this antenna are included with this package.

Measured vertical polarized directivity:	2.154 / 3.332 dB
Measured horizontal polarized directivity:	2.188 / 3.401 dB
Measured circular polarized pattern directivity:	1.754/ 2.440 dB

Gain in each polarization was calculated using the following relation:

GAIN = *Azimuth Directivity x Power Ratio Between Polarizations x Elevation Directivity*

Using this relationship along with ratio measured at our testing facilities:

V-Pol. Gain = (2.154)(.504)(0.883) =	0.958 / -0.185 dB
H-Pol. Gain = (2.188)(.496)(0.883) =	0.958 / -0.185 dB

INSTALLATION AND MOUNTING

The antenna is to be mounted in accordance with the supplied drawings. The antenna center of radiation is to be **98 meters (321.54 ft.)** above ground level. The antenna aperture is **6 feet**. No other antennas are to be mounted within **10 feet** of the antenna. No other obstructions other than those specified by original drawings supplied are to be mounted at the same level as the antenna. The antenna is to be oriented **350 degrees** true North.

The system's orientation and the mounting details are described in the following drawings:

DRAWING NO.	TITLE
1764D10	ELEVATION
1764D11	ANTENNA ORIENTATION
2105A10	TEST RANGE SCHEMATIC

The antenna elevation is shown on **DWG. 1764D10**. The antenna elements shall be aligned at the same heading as in **DWG. 1764D11**. This will ensure that the antenna is oriented properly at **350** degrees true North. The test range schematic **DWG. 2105A10** shows the mounting configuration of the antenna setup on our range.

DOCUMENT EXHIBITS

The following exhibits are included as part of this Certificate of Compliance:

Surveyor's Declaration

I, _____, subject to the penalties of perjury, do declare the following:

- 1.) I am a licensed surveyor in the state(s) of _____, _____ and _____.
- 2.) I have provided professional services to _____ (permit tee name), permit tee of KKML-FM, Minden (city of license), LA (state), during the installation of the KKML-FM directional antenna.
- 3.) I certify that the KKML-FM directional antenna has been oriented at the proper azimuth as authorized in the drawings section (Exhibit 7) of the Proof of Performance for KKML-FM. Namely Drawing #1764D11 shows the proper heading to be 350 degrees from true North.

Engineer's Declaration

I, _____, subject to the penalties of perjury, do declare the following:

1.) I am the holder of a valid General Radio Telephone Operators License, Number _____ (FCC License No.)

2.) I have been a member of the Society of Broadcast Engineer's since _____(year)

3.) That I have been employed as a technical consultant with the firm of:

_____ (firm name), of

_____ (city state)

4.) That _____(Firm's Name) was retained by _____ (Permit tee's Name) for the purpose of preparing its application for the construction permit of KKML-FM Minden (City), Louisiana (State), from which the underlying Construction Permit (FCC File Number BNPED-20071015AFG) was granted by the Commission.

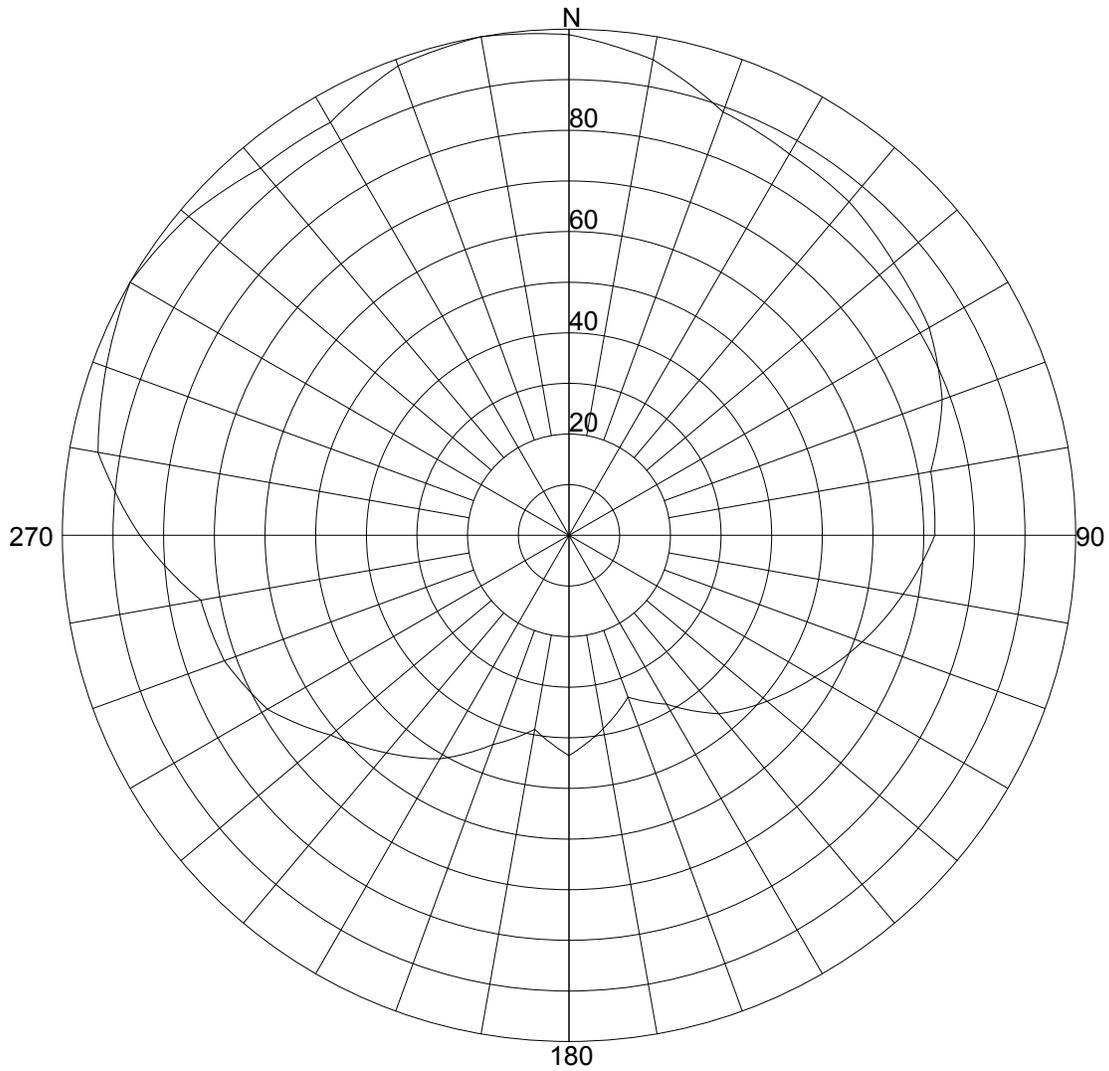

1.) That I am familiar with the terms and conditions of the KKML-FM Construction Permit.

2.) I hereby certify that I have overseen the installation of the KKML-FM directional antenna and that the installation was complete to the manufacturer's instructions outlined in the Proof of Performance Drawings section (Exhibit 7) for KKML-FM.
