ERP and HAAT are on direct line to and from reference station.
*"Affixed to 'IN' or 'Out' values = site inside protected contour.

Protected zones report for K232DQ on channel 232 06-15-2005
N. Lat. 41 17 34 W. Lng. 122 18 18, ERP= 0.01 kw, HAAT= 1465.5M

Facility okay with respect to Canada.
Facility okay with respect to Mexico.
Facility is okay with respect to AM station towers.
Facility is okay with respect to FCC monitoring stations.
Facility is okay toward West Virginia Quiet Zone.
Facility okay toward Table Mountain.

Exhibit 12 (Compliance with CFR 74.1204)

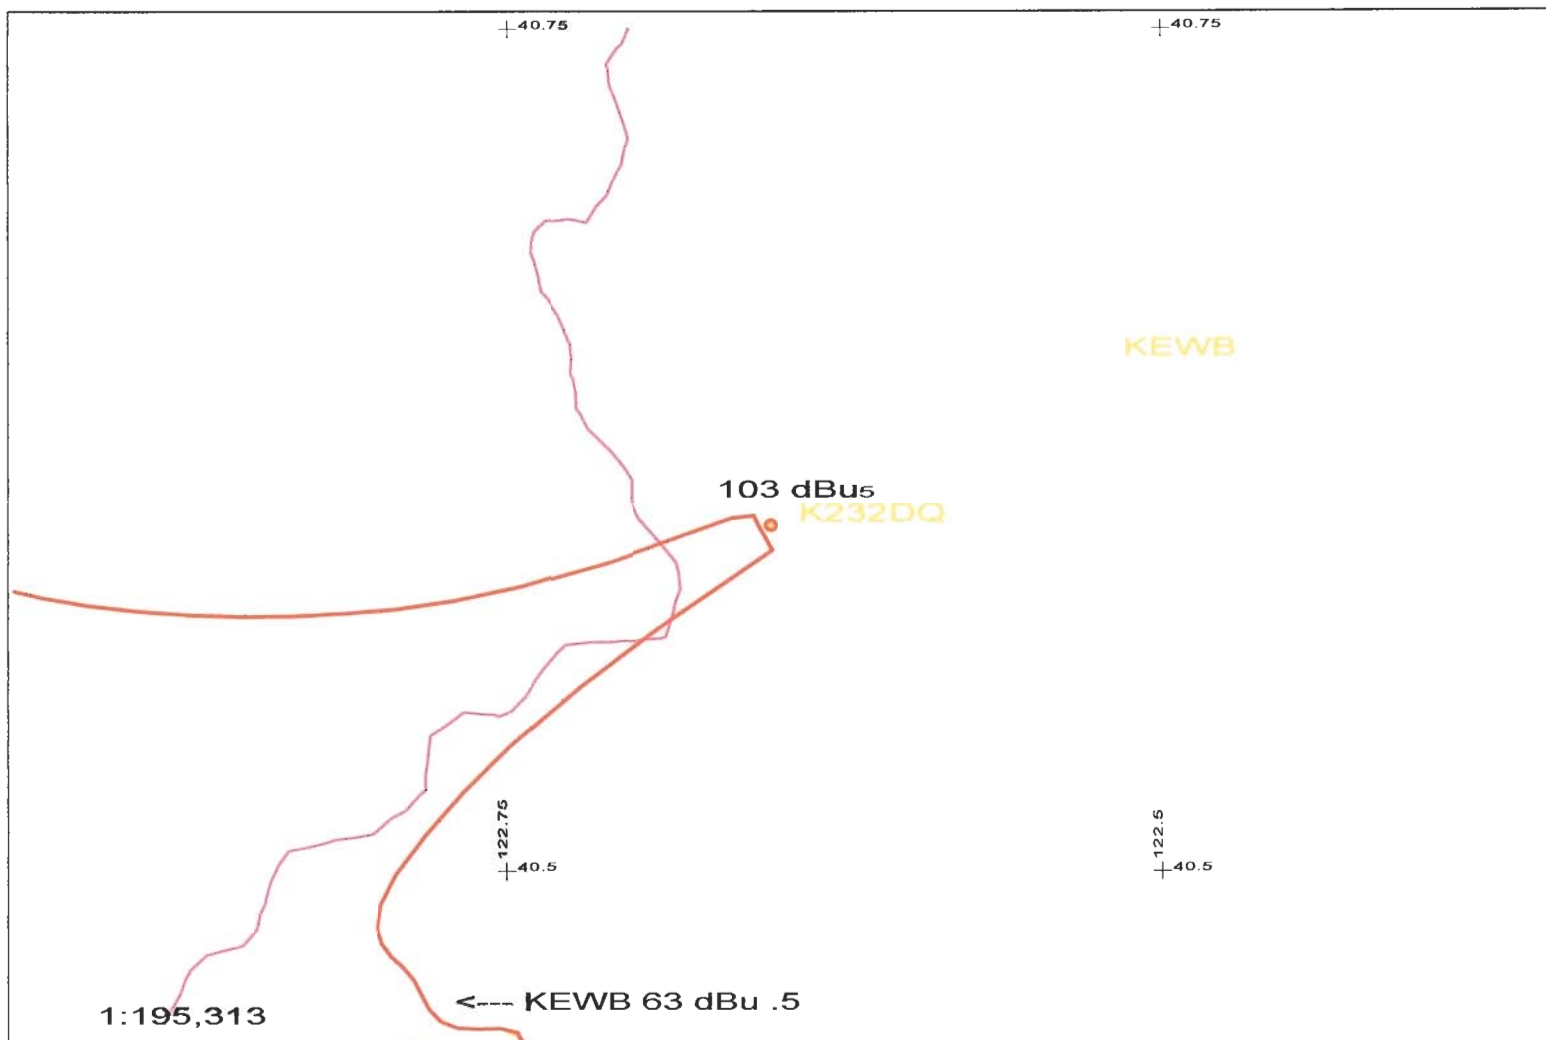

The proposed FM Translator is located within the protected 60 dBu contour of second adjacent channel station KEWB, channel 234C2, Anderson, CA. The predicted F(50-50) field strength of KEWB at the proposed translator site is 62.5 dBu, *see Exhibit 12A*. Therefore, the respective predicted interfering contour generated by the proposed FM Translator is 102.5.dBu. This interfering contour extends less than 166 meters from the proposed transmit antenna, and the area of overlap is unpopulated.

Two factors have been investigated to determine this absence of population:

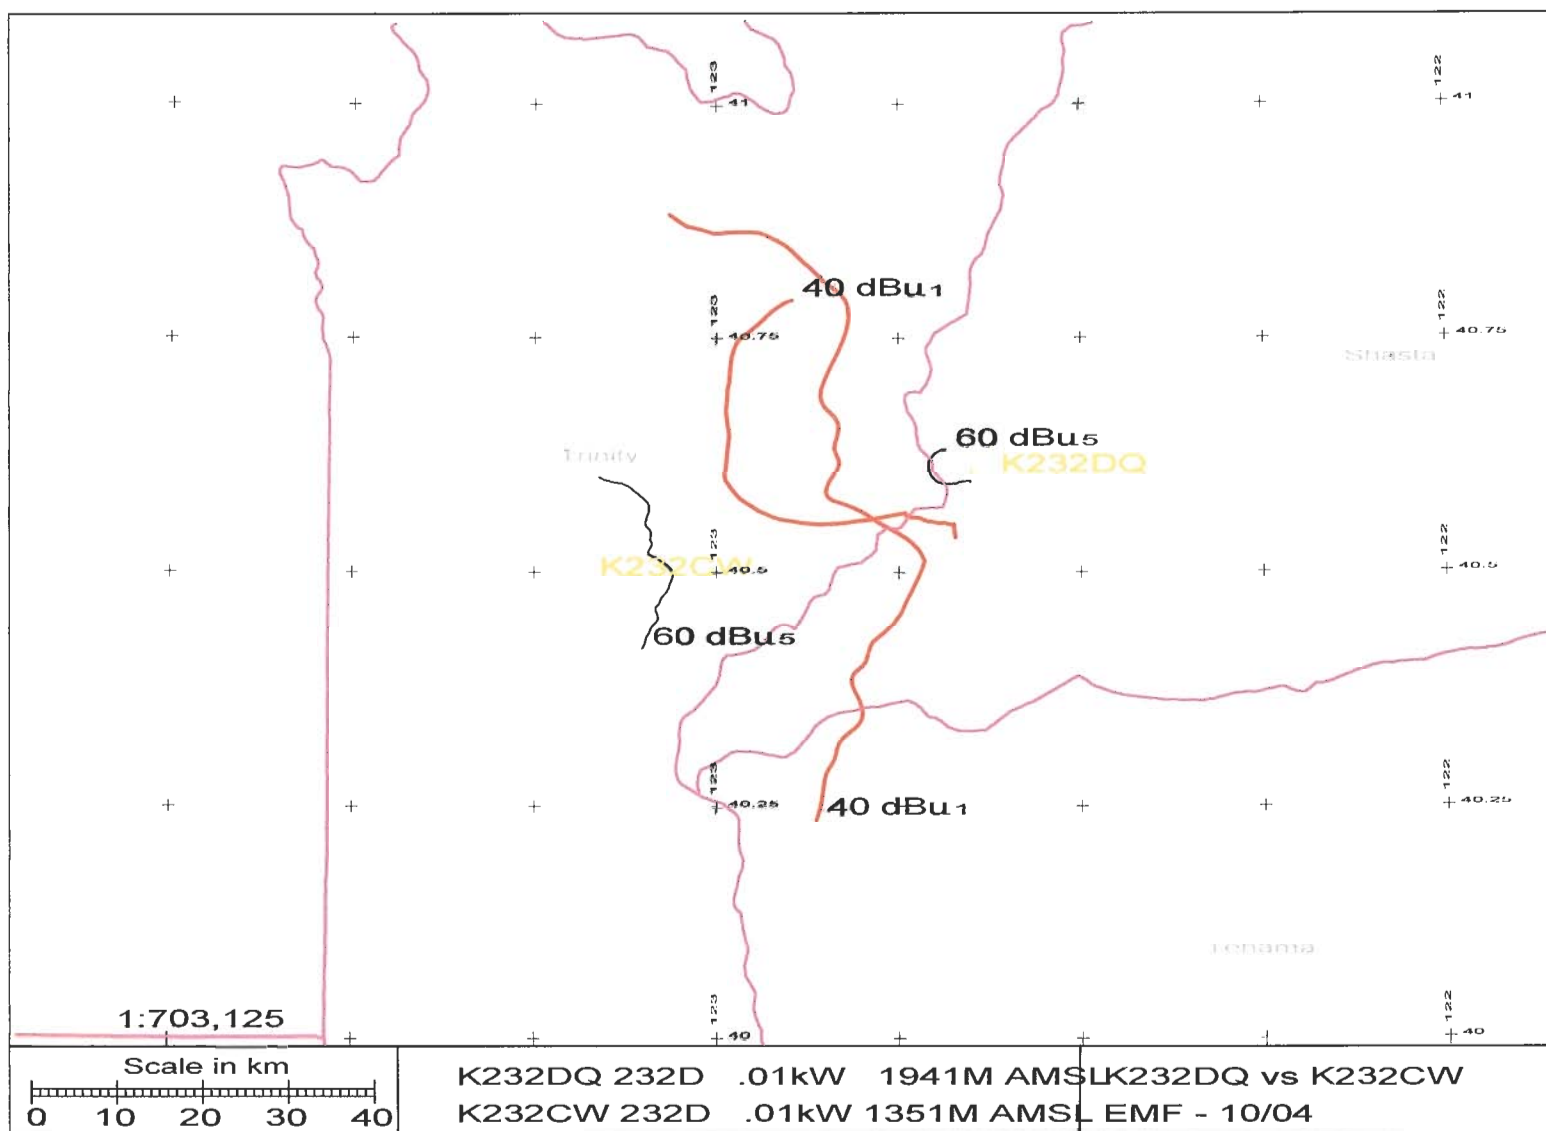

1) Computer software which uses the centroid method of determining population centers, based on the 2000 census data, has determined that there are no persons within the area of overlap.

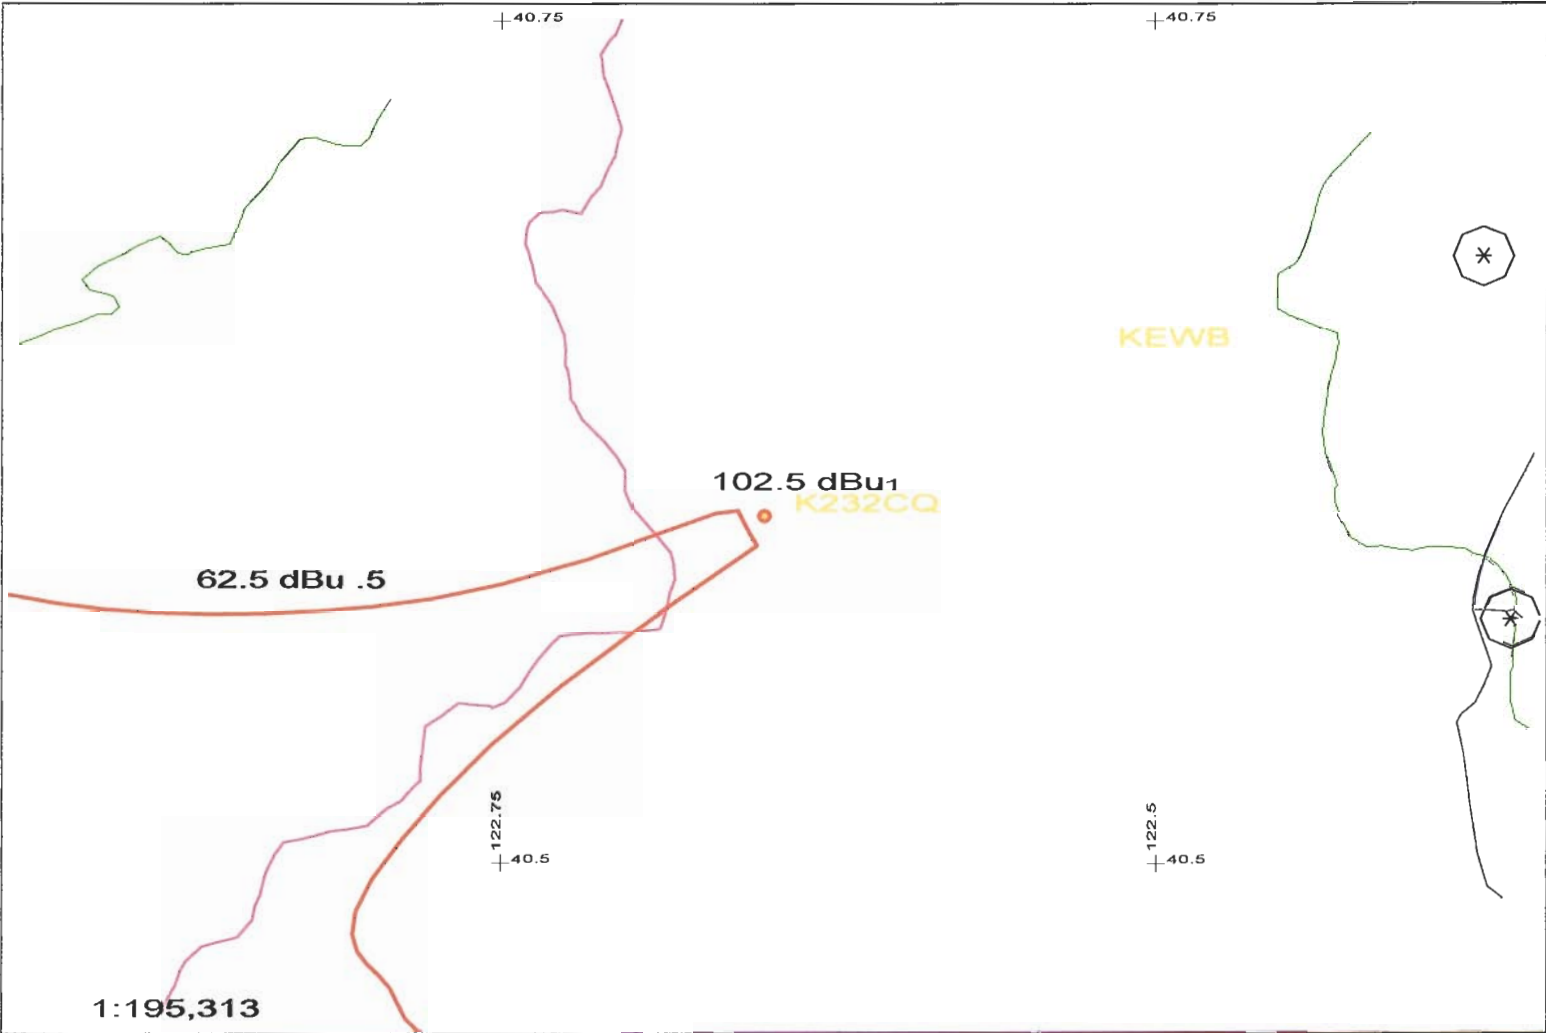

2) Examination of the USGS topographic map reveals no regularly occupied structures within the area of overlap.

Therefore, EMF respectfully requests a waiver of C.F.R. 74.1204 based on no population within the area of predicted interference.
