

The transmitter site is located at a industrial area in Stockton and the blanketing contour does not cover any populated areas.

The station agrees to abide by the requirement to reduce power to a safe level or cease operation should any work on the antenna support structure need to be performed.

Attached is the license application (FCC-302-FM) to cover the operating parameters for the above referenced construction permit and the applicant would like to request FULL PROGRAM TEST AUTHORITY as soon as possible.

As per FCC rules CFR 73.1620 the station is operating under limited program test authority at 50% power ERP.

This engineer is satisfied that the entire transmission system is in compliance with the terms and special conditions indicated in the Construction Permit and the entire transmission system is functioning properly.
