WOMC(FM) FCC 302-FM Application
Section III Certification
Environmental
CBS Radio Inc. of Michigan
December 3, 2008

An Environmental Assessment is not required, as grant of this application would not be considered a major environmental action.

The applicant has replaced its auxiliary antenna with an SWR model FM10R/6. This is a 6 bay, full wave length spaced antenna. The new antenna has the same electrical characteristics as the former auxiliary antenna that it replaced. No change in center of radiation above ground, TPO or ERP has resulted.

The proposed transmitting facilities will continue to comply with the FCC guidelines limiting human exposure to radio frequency energy. The maximum power density level at ground level, calculated in accordance with OET Bulletin No. 65 (August 1997), less than 6% of the applicable limit for exposures of unlimited duration. Accordingly, the proposed facility is categorically excluded by FCC Rules from having to consider the contributions of other stations at the site. If work is done on the tower in an area where over exposure could occur, the Licensee in coordination with the other users will take necessary action to prevent the overexposure of workers on the tower including reducing the transmitting power or ceasing operation completely.
