

## **SPECIAL OPERATING CONDITION COMPLIANCE STATEMENT:**

By paragraph number listed on the Construction Permit, BPFT-20160129ATW, for K251BT, facility ID 142168. The following is will show the compliance with the Special Operating Conditions:

- 1) K251BT has entered into a rebroadcasting agreement with KXRE(AM) Manitou Springs, Colorado, facility ID 142168, 1490 Khz. This agreement has a term of a minimum of 4 years. K251BT will rebroadcast KXRE(AM) for a minimum of 4 years as required.
- 2) Special Operating Condition #2 basically calls for measurement of the AM station base resistance, or in this case, AM station KXRE(AM) Manitou Springs, Colorado, facility ID 142168, to confirm that with the addition of the FM antenna and transmission line, that KXRE's base impedance did not change by more than 2 percent. KXRE(AM) operates with a "folded Uni-Pole" style antenna system. The tower operates at an electrical ground with a wire "skirt" which is excited for use by KXRE(AM). The FM antenna was mounted on the grounded tower, and transmission line was fed down the center of the tower to help not effect the AM's impedance. Measurements were made using an Delta Electronics Electronics OIB-3 Impedance bridge. No material change in base impedance was measured after the addition of the FM antenna and transmission line for K251BT. Base resistance for KXRE(AM) remains 107 ohms. Thus, a new license application Form 302-AM for KXRE(AM) is not required (See attached tower sketch).
- 3) The licensee will cooperate and coordinate with other users of the site to either reduce power or cease broadcasting if maintenance or service is needed on the KXRE(AM) tower site.
- 4) Form 350 is being filed prior to normal broadcasting is commenced with K251BT.
