

**EXHIBIT 8 constructed Facility**  
**Special Operating Condition 1**  
KXNT-FM FAC ID 12560  
FCC 302 Application  
October 8, 2014

The underlying Construction Permit for an auxiliary antenna, BMXPH-20140417ABA, specified the use of a combiner system for shared use by 4 CBS owned stations.<sup>1</sup>

Due to delays in local building permitting and construction, CBS is unable to install the combiner system at this time. However, the station has installed the antenna and has obtained a frequency agile transmitter that will permit “one at a time” operation.

CBS anticipates that the combiner will be installed within 5 months of this date. At completion of the combiner installation, harmonic and distortion measurements will be made and filed with the Commission showing that the system is in compliance with FCC rules.

CBS hereby requests that this application satisfies the requirements for Program Test Authority for CBS to operate its auxiliary facility in a “one at a time” configuration.

---

<sup>1</sup> KLUC-FM, KXNT-FM, KMXB, and KXTE will share the auxiliary antenna utilizing a combining system.
