Interference Area to WKMX and WZHT
Enterprise, Alabama

The Proposed translator is within the 60 dBu contour of upper second adjacent station WKMX, channel 294, and lower third adjacent station WZHT, channel 289. The WKMX contour at the translator site is 97 dBu F(50,50) and the WZHT contour at the translator site is 65.5 dBu F(50,50). Using the ratio of 100:1 (translator to WKMX and WZHT) on the second and third adjacent channel, the population within the proposed translator 137 dBu and 105.5 dBu contour is zero. Using the free space equation, the predicted interference area is expected to extend 2 meters, for WKMX, and 83 meters for WZHT, from the antenna. The antenna is 91 meters above ground level thus the interference area will never reach the ground. Therefore, the application is in compliance with the following: §74.1204 (d) "The provisions of this section concerning prohibited overlap will not apply where the area of such overlap lies entirely over water. In addition, an application otherwise precluded by this section will be accepted if it can be demonstrated that no actual interference will occur due to intervening terrain, lack of population or such other factors as may be applicable."
