

## Proposed Site Spacing

The proposed facility is a class B Grandfathered short-spaced station (as defined in 47 C.F.R. 73.213) serving Livermore, California on channel 297.

The proposed facility does not meet the separation requirements of 47 C.F.R. 73.207(b) with respect to second-adjacent KSAN, channel 299B, San Mateo, CA and second-adjacent KFRC-FM, channel 295B, San Francisco, CA.

However, according to 73.213(a)(4), there are no distance separation or interference protection requirements with respect to grandfathered second and third adjacent channel short-spacings.

Therefore, the proposed facility is in compliance with spacing requirements in relation to KSAN and KFRC-FM.
