New Life Christian School
RF Compliance
Lake Havasu City, Arizona

The applicant proposes securing the site with a fence to ensure compliance with FCC OET Guidelines for human exposure to radiofrequency electromagnetic fields. RF Worksheet #1 was used to determine the maximum distance for fencing. The site is located in an isolated area, accessible only by a dirt road. A fence, 36 meters from the tower, will be constructed to surround the area of RF exposure. This represents a worst-case calculation and may be refined upon actual field measurements. Exhibit 22 Figures 1 and 2 show a topographic map and an aerial photograph, at 1:24000 scale, to show a lack of population within the area of the Site.
