Gospel Music Omaha
Second-Adjacent Waiver Request
Omaha, NE

The proposed LPFM station will broadcast on channel 262, which is within the 84 kilometers second-adjacent minimum distance separation of station KGOR on channel 260 and the 84 kilometers second-adjacent minimum distance separation of station KGBI-FM on channel 264. The KGOR interfering contour at the LPFM tower site is 120 dB μ F(50,50). The KGBI-FM interfering contour at the LPFM tower site is 120 dB μ F(50,50). Using the ratio of 100:1 (LPFM to KLRX and KMBZ-FM) on the second-adjacent channel, the population within the proposed LPFM 160 dB μ contour is zero. Using the free space equation, the predicted interference area is expected to extend 0 meters from the antenna. The antenna is 20 meters above ground level, thus the interference area will never reach the ground. There are no occupied structures or elevated roadways within the interference within the interference area of the LPFM. Therefore, the application is in compliance with §73.807(e)(1) *Waiver of the second-adjacent channel separations.*
