

ENGINEERING STATEMENT
OF
JOHN F.X. BROWNE, P.E.
IN SUPPORT OF AN APPLICATION FOR
MINOR MODIFICATION OF A POST-TRANSITION CONSTRUCTION PERMIT
WCML-DT
ALPENA, MI

Background

Central Michigan University is the licensee of WCML-DT which has been authorized to operate its post-transition DTV facility on Channel 24 (BMPEDT-20080617ABT) at Alpena, MI, with an ERP of 300 kW at a HAAT of 393m. The tower is located at the following coordinates:

(NAD27)

45° 08' 18" N

84° 09' 45" W

The antenna that WCML has been operating with since 2005 (Dielectric TUF P4-12/48-1-T) has erroneously been characterized as an omni-directional antenna. This application is to correct that error. All other facility parameters will remain the same.

Antenna System and Tower

The antenna patterns and dBk table for the Dielectric TUF P4-12/48-1-T antenna (which has been in use since 2005) are included as exhibits 1a-1d and Table 1. The antenna is installed on a tower (ASR#1002163) that has an overall height of 734m AMSL (with appurtenances). The antenna has a center-of-radiation of 673m AMSL (with a calculated HAAT of 393m). No modifications of the tower are necessary to effect this antenna change since the antenna has been in use since 2005.

Coverage

The entire principal community of Alpena, MI is well within the predicted F(50,90) 48 dBu contour based on the proposed 300 kW ERP. The facility using the directional antenna is predicted to serve 86 percent of the population predicted to be served by the maximized omni-directional facility (BMPEDT-20080617ABT) and is predicted to serve 99 percent of the population predicted to be served by the "Appendix B" facility. In fact, no viewers that have been receiving the WCML digital signal since 2005 will be adversely affected by this change.

Interference

There would be no increase in interference caused by this change since the currently authorized CP specifies operation at 300 kW from the same tower and the same radiation center height with an omni-directional antenna. The directional radiation pattern does not exceed the authorized pattern in any azimuth.

Environmental/RFR

The proposed construction does not require preparation of an Environmental Assessment as it does not involve any of the factors listed in Section 1.1306.

The additional ground level RFR contributed to the site by this proposal in public areas is calculated to be $0.0009073 \text{ mW/cm}^2$ which is less than 5% of the MPE for public exposure (0.36 mW/cm^2) at the proposed frequency and, therefore, the proposal is excluded from further consideration.

WCML agrees to comply with the Commission's requirements regarding power adjustments or cessation of operation as may be necessary to ensure a compliant environment for worker access. Workers will be encouraged to wear personal RFR monitors when on the structure and will receive instruction on the presence of RFR and its mitigation. The tower base is enclosed by a locked security fence and appropriate signage warning of RFR hazards is posted.

Certification

I hereby certify that the foregoing report or statement was prepared by me but may include work performed by others under my supervision or direction. The statements of fact contained therein are believed to be true and correct based on personal knowledge, information and belief unless otherwise stated; with respect to facts not known of my own personal knowledge, I believe them to be true and correct based on their origin from sources known to me to be generally reliable and accurate. I have prepared this document with due care and in accordance with applicable standards of professional practice.
