"*Affixed to 'IN' or 'Out' values = site inside protected contour.

ERP and HAAT are on direct line to and from reference station.

"<" = Station meets FCC minimum distance spacing for its class.

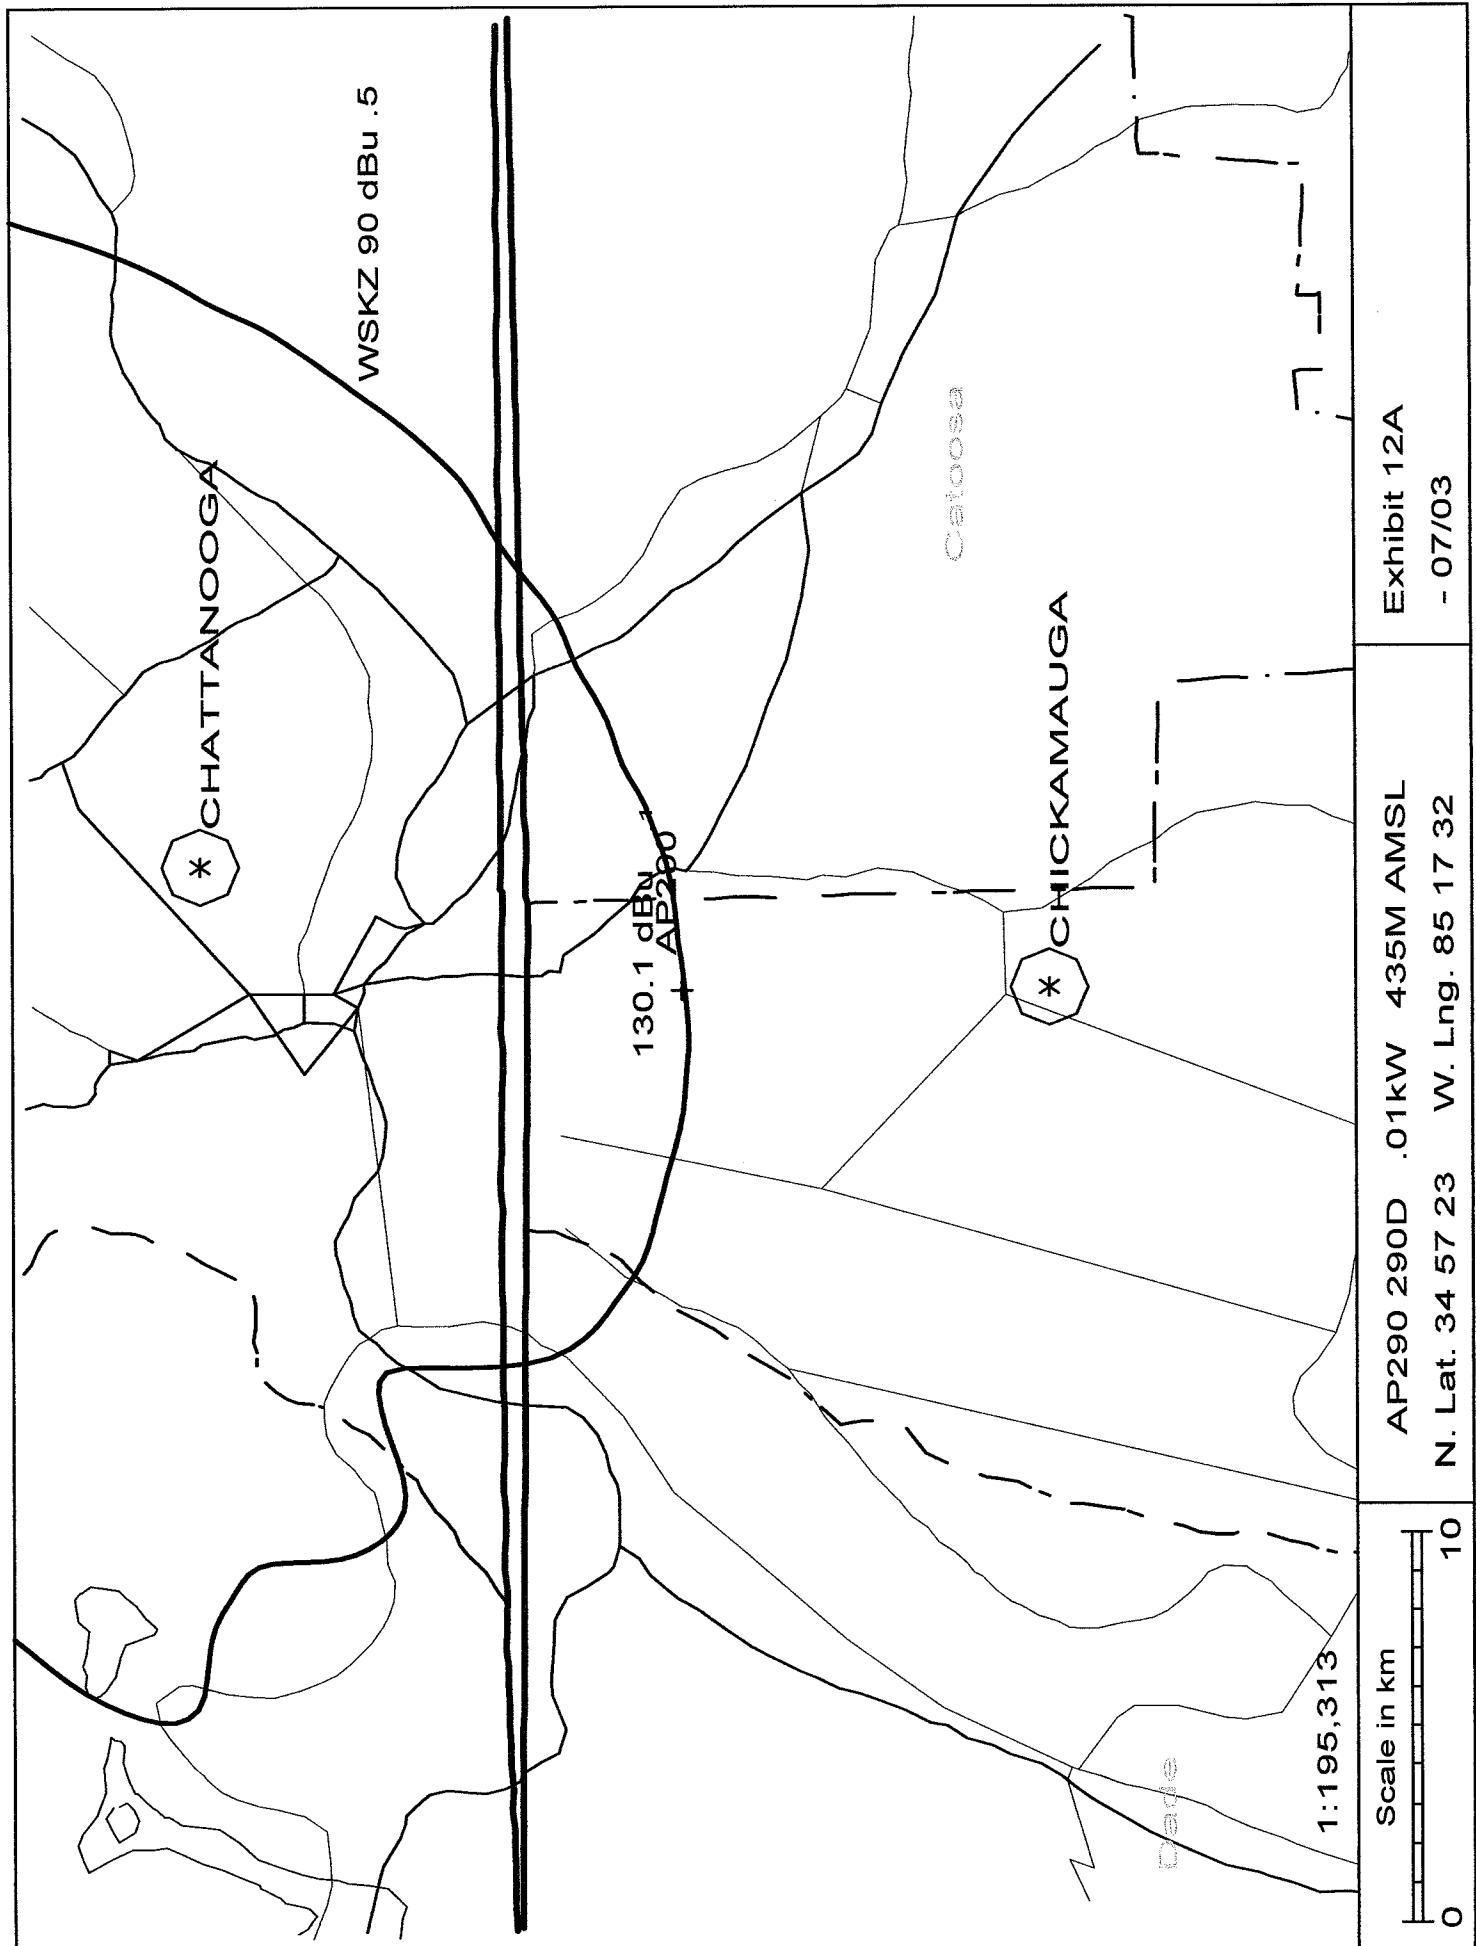

Exhibit 12 (Compliance with CFR 74.1204)

The proposed FM Translator is located within the protected 60 dBu contour of third adjacent channel station WSKZ, channel 293C, Chattanooga, TN. The predicted F(50-50) field strength of WSKZ at the proposed translator site is 90.0 dBu, see Exhibit 12A. Therefore, the respective predicted interfering contour generated by the proposed FM Translator is 130.0 dBu. This interfering contour extends less than 7 meters from the proposed transmit antenna, and the area of overlap does not reach the ground (the antenna will be mounted at the 99 meter level on a 130 meter tower).

The proposed FM Translator is located within the protected 60 dBu contour of second adjacent channel station WRXR, channel 288A, Rossville, GA. The predicted F(50-50) field strength of WRXR at the proposed translator site is greater than 110 dBu. Therefore, the respective predicted interfering contour generated by the proposed FM Translator is greater than 150.0 dBu. This interfering contour extends less than 1 meters from the proposed transmit antenna, and the area of overlap does not reach the ground (the antenna will be mounted at the 99 meter level on a 130 meter tower).

To confirm the absence of population within the interference aperture, EMF has examined the attached topographic map, which indicates a lack of structures near the proposed tower, and therefore no structure which could be tall enough to enter the 7-meter interference aperture.

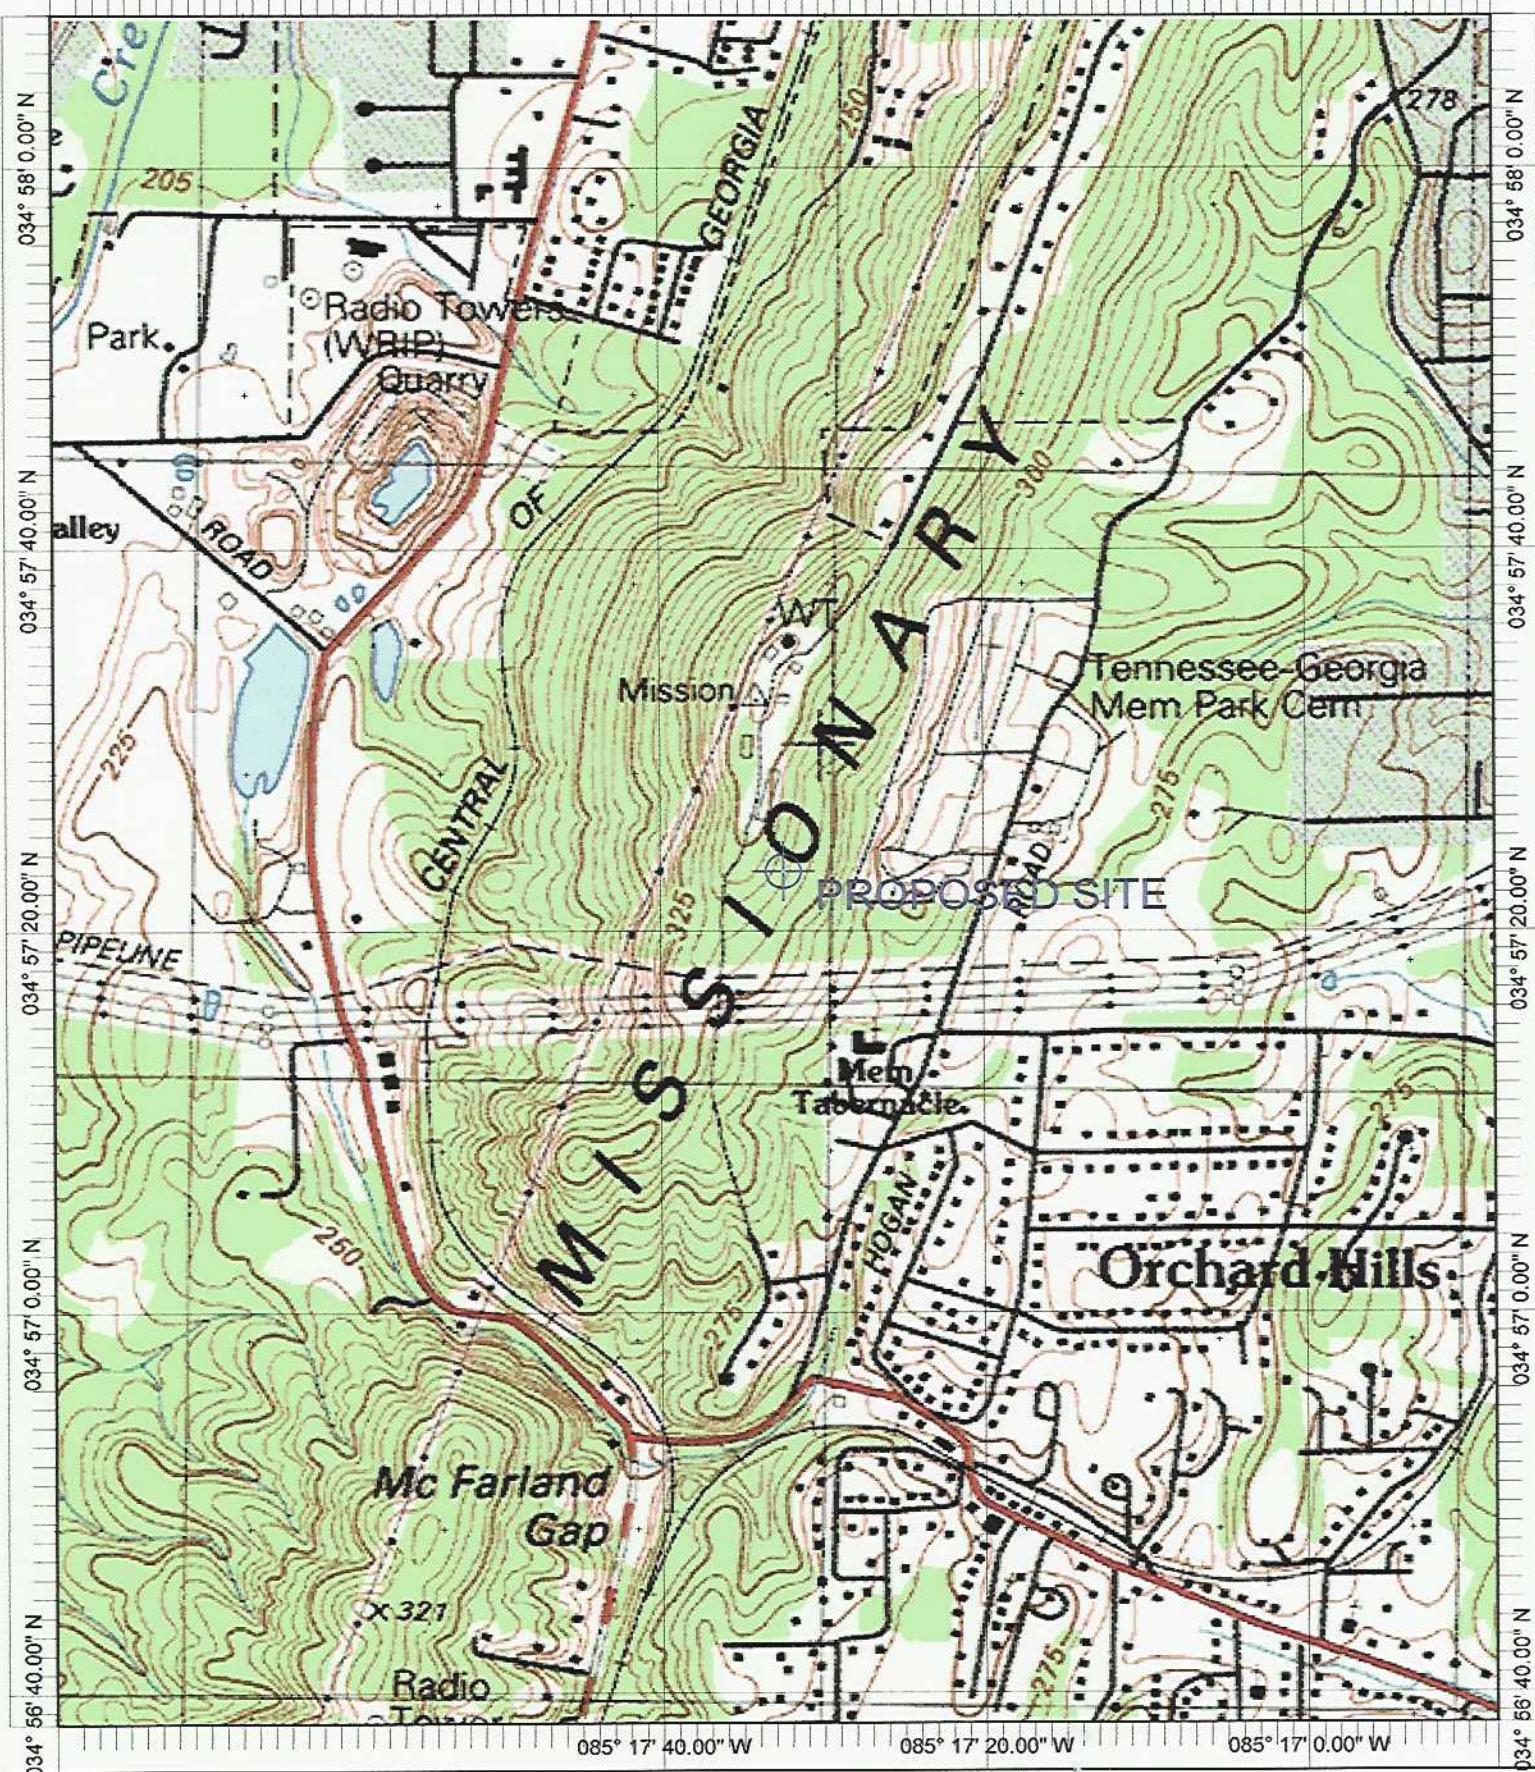

Therefore, EMF respectfully requests a waiver of C.F.R. 74.1204 based on no population within the area of predicted interference.
