Subject: Antenna for KCLM

Affidavit:

I hereby state that, based on a survey performed under my direction on June 11, 2013 the antenna of the KCLM FM station approximately 15 mile East of Santa Maria, California (on Tepusquet Peak) is oriented to an Azimuth of 298 degrees plus or minus one degree of True North. A True North bearing at the site was established using the previously established tower orientation from Family Stations, Inc. KHFR, which was also under my direction.
