Dear Sir,

This will serve as the exhibit for the RF Radiation Hazard calculation for this proposed facility.

The RF radiation near the ground (2 meters above ground) can be calculated using the OET-65 formula for broadcast stations taking into account the following factors

S= power density in watts per square meter

P= total Effective Radiated Power from the antenna

F= field radiated on the axis to the ground level

R= distance to the ground level (actually 2 meters above ground)

Therefore, given the following data for Proposed Facility on channel 44:

P= 15 kwatts

R=Radiation center above ground level – 2 meters)
= 282 meters

F= 0.1 for UHF antennas

The RF radiation near the ground level can be calculated with the following result:

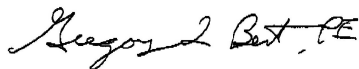

0.06 $\mu\text{watts/cm}^2$

which is 0.01 % of the general population exposure limit of 435 $\mu\text{w/cm}^2$ for this channel

This calculation indicates the RF exposure meets the OET-65 requirements.

Should you have any questions regarding this information please contact me.

Sincerely,

President
