

Exhibit 11
Edgewater Broadcasting, Inc.
Adjacent Interference
Shiprock, New Mexico

The Proposed translator on FM Channel 281D with facilities of 1.0 Watt ERP at 119.36 meters AAT is within the 60 dBu contours of station KKFG on 2nd upper adjacent Channel 283. The KKFG contour at the translator site is 60.0 dBu (F50,50). Based upon the ratio of 100:1 (translator to KKFG on the upper 2nd adjacent channel) the population within the proposed translator 100.0 dBu is zero. The interference area is calculated by the free space equation to extend 70 meters from the translator antenna. The antenna is 98 meters above ground level, thus the interference area will never reach the ground. Therefore, the application is in compliance with the following: §74.1204 (d) "The provisions of this section concerning prohibited overlap will not apply where the area of such overlap lies entirely over water. In addition, an application otherwise precluded by this section will be accepted if it can be demonstrated that no actual interference will occur due to intervening terrain, lack of population or such other factors as may be applicable."
