

On November 10 and 15 of 2011, I served as the on-site representative for My Redconnection, during the installation of the transmitting antenna and transmitter for the Construction Permit (BMPED-20110504AAZ) of KODV 89.1 MHz, licensed to Barstow Ca.

The antenna is a Shively 6810 2-bay circularly polarized directional, manufactured specifically for this installation. Shively provided site-specific installation document, which was followed in all detail. No on-site revisions or alterations were needed or made, either electrically or mechanically.

Also on December 23, 2011 the orientation of the antenna system was surveyed by the registered surveying company of Strayer Surveying and Mapping from Barstow Ca. The results of the surveyor are to be supplied separately.

I, Israel Castillo S, have been a broadcast engineer for Family Stations, Inc. for over 15 years with experience in broadcast transmission facility construction installation and maintenance.
