November 9, 2012

To whom it may concern:

On November 5, 2012, a survey crew from David Laird Associates was sent to 1324 South Shore Drive at South Shore Place in Erie, Pennsylvania. The crew established the center point of the proposed tower to be erected and from said center point a baseline bearing was established for the antenna orientation. This bearing was an azimuth of 150 degrees from True North. This bearing was shown on the erection plans as a bearing of N 150 degrees E. Said baseline was marked on the concrete for the antenna base.

If you have any questions or need additional information, please contact me at 814-456-0330.

Best Regards,

John B. Laird, P.L.S.
