

EXHIBIT

Station WRBJ(TV) is an analog singleton station for which the license was granted without a paired digital television channel. The station will flash cut to digital operation on the current analog channel on the February 19, 2009 transition date. The digital operations will utilize the existing analog antenna installed at the site, and no additional equipment will be needed. This minor modification seeks authority for the post-transition digital operations in conformance with the specifications set forth in the DTV Table of Allotments.

Environmental Considerations

The proposed construction will not have a significant environmental impact. The proposed antenna will be mounted on an existing tower without making any structural changes or changing the overall height. Calculations of RF exposure levels have been performed in accordance with OET Bulletin No. 65, Edition 97.1, dated August 1997, and the maximum contribution from this facility, at any accessible point in the vicinity of the tower, other than on the tower, or the adjacent tower, was found to be much less than 5% of the permissible exposure level for the general public. This facility is therefore categorically exempted from the cumulative RF exposure requirements. Policies are in place to reduce power and/or shut down transmitters as necessary in order to limit RF radiation exposure to the public and to persons authorized access to the site.
