Supervising Engineer Affidavit

Patrick O. Roberts supervised the entire scope of the antenna installation process authorized by FCC Permit File Number BMPED-20101109ACQ for radio station KOUA on Oct 19th 2010.

To my knowledge all of the necessary requirements of the permit were met including stressing the importance to the construction crew and chief to be aware of the critical installation and proper alignment and orientation of parts necessary to achieve the desired outcome.

All printed manufacture's installation instructions and recommendations were understood and followed by installation personnel. The Supervising Engineer was on site for the entire project. The antenna system was sighted for alignment by Smith Roberts Baldischwiler, LLC for correct orientation.

The person supervising the project is the Broadcast Engineer responsible for the technical operation of KOUA, obtained a certification of "Broadcast Engineer" from the Society of Broadcast Engineers in 1998, and holds an Amateur Radio License KA5ZYM.
