

**Gold Coast Broadcasting LLC  
KOCF(FM), Camarillo, California  
FCC Form 301 Minor Change**

**REQUEST FOR APPLICATION PROCESSING WITHOUT EFFECT ON  
AUTHORIZED CONSTRUCTION PERMIT**

Gold Coast Broadcasting LLC (“Gold Coast”), the licensee of radio station KOCF(FM), Camarillo, California, respectfully requests that the Commission process and grant the instant FCC Form 301 application for a minor change in the licensed facilities of KOCF independent from and without effect on the underlying construction permit for KOCF. See FCC File No. BPH-20040720ADT.

Although modification applications are usually filed with the intent to modify or supersede a construction permit or license already held by an applicant, the Commission has also permitted applicants to file minor modification applications seeking an independent authorization which will not supersede an existing permit or license.<sup>1</sup> There is no Commission rule which bars such an application.

The instant application proposes to increase the power of KOCF significantly, and will require completely different and more robust transmission facilities that are tailored to another frequency and will require modification of currently planned infrastructure, such as buildings, electrical service, and the like, which will all require building permits and other local authorizations. KOCF expects that it will complete construction of its lower powered facilities presently authorized in BPH-20040720ADT before the instant application is granted, and certainly long before its more robust facilities can be approved by local authorities, constructed, produced, and placed into service. Gold Coast accordingly plans to file a covering license application for the facility authorized in BPH-20040720ADT prior to completing construction of the facilities proposed in the instant application, and it accordingly requests that the Commission grant this instant application for a minor change in the licensed facilities of KOCF without effect on the station’s current construction permit BPH-20040720ADT.
