

Supplemental Engineering Statement  
Kevin O’Kane  
June, 2009

The application for WWDG-CA (formerly W12BZ) is being amended to change the offset from minus 10 kHz to zero. This will reduce any potential interference to or from CJOH-TV, channel 6, Deseronto, ON. Canadian concurrence is not required as there is no change to the 2 dBu contour. Originally with the proposed minus 10 kHz offset (which is the same as CJOH), the pertinent contour was the 2 dBu (50,10). Changing to a zero offset, as proposed, would then cause the 19 dBu contour to be the pertinent one. However, the 2dBu contour, which is the more critical of the two contours, is not proposed to be changed and Canadian concurrence for has already been received.
