PURPOSE OF APPLICATION AND WAIVER REQUEST  
Evangelistic Alaska Missionary Fellowship, Inc.  
Dot Lake, AK

The attached application proposes operation by K296DU from a site 1.6 kilometers to the south-southwest of the presently authorized site. This modification will be considered a minor change since there is substantial overlap between the presently licensed and proposed predicted 60 dBu contours.

Section 74.1235 of the FCC Rules details the maximum height/power combinations for translator stations. Because the proposed facilities exceed the height/power combination limits detailed in this section of the FCC Rules, a waiver of Section 74.1235 of the is respectfully requested. Paragraph 108 of the Report and Order in MM Docket 88-140, which established these limits, states that a waiver of this rule section may be obtained to permit operation by a noncommercial educational translator at an effective radiated power of up to 250 watts at any antenna height if the applicant can demonstrate that the 60 dBu contour does not receive full time service from any full service station. In the instant case, there are no full service or secondary stations that provide service to any portion of either the present or proposed K296DU 60 dBu service contours. The nearest full service AM contour falls in excess of 100 kilometers beyond the proposed 60 dBu service contour and the nearest FM contour falls in excess of 30 kilometers beyond the proposed 60 dBu service contour.

Based on the above information, K296DU will continue to provide the first aural service to the entire area within the predicted 60 dBu contour for the facilities proposed in the attached application, which should provide ample justification for the grant of the waiver of Section 74.1235 of the FCC Rules which is necessary to permit the attached application to be granted, as well as the continuing waivers required to permit K296DU
