

TECHNICAL EXHIBIT
APPLICATION FOR MODIFICATION OF
LICENSED FACILITY
(FCC FILE NO. BLTTL-19990804AAC)
LPTV STATION KBFK-LP
FACILITY ID 23275
BAKERSFIELD, CALIFORNIA
CH 36 150 KW (MAX-DA)

Technical Narrative

The technical exhibit of which this narrative is part was prepared in support of an application to make a minor modification to the licensed operation of LPTV station KBFK-LP at Bakersfield, California (Facility ID: 23275; File No. BLTTL-19990804AAC). Specifically, this application proposes to increase the effective radiated power (ERP) from 29 kW to 150 kW and to change the directional antenna system orientation from 270 degrees true to 250 degrees true. No other changes are proposed including no change in site, antenna radiation center height above mean sea level (RCAMSL), or community of license (Bakersfield). This application is considered a "minor change" in facilities pursuant to Section 73.3572(a)(2), as there will be no change in frequency (output channel) and the proposed 74 dBu contour will overlap a portion of the licensed 74 dBu contour.

It is proposed to operate on channel 36 (602-608 MHz) with a "plus" carrier frequency offset and employing a Antenna Concepts ACB16DR directional antenna system orientated at 250 degrees true. The maximum ERP will be 150 kW. The antenna radiation center will be 1046 meters above mean sea level. According to the FCC's TOWAIR program, the existing 30.2 meter antenna supporting structure does not require registration.

Minor Change Application

Figure 1 depicts the licensed and herein proposed 74 dBu contours for KBFK-LP. As indicated, the proposed 74 dBu contour encompasses a portion of the licensed 74 dBu contour. Therefore, the proposed modification is considered a "minor" change in facilities pursuant to Section 73.3572.

Analog TV Broadcast Station Protection

A study has been conducted using the provisions of Section 74.705 which indicates that the proposed KBFK-LP operation will not create prohibited interference to other existing, authorized or proposed NTSC full-power stations.

DTV Station and DTV Table of Allotments Protection

Calculations based on OET Bulletin No. 69 indicate that the proposed KBFK-LP operation on channel 36 complies with the FCC's 0.5% interference threshold criteria to all allotted, proposed or actual DTV operating facilities on channels 35 and 36 (channel 37 reserved for radio astronomy). The results are tabulated in Figure 2.¹

LPTV/TV Translator/Class A Protection

A study has been conducted using the provisions of Section 74.707 which indicates that the KBFK-LP proposal will not create prohibited interference to other existing, authorized or proposed LPTV/Class A stations except with respect to the licensed (BLTT-20021009AAE) and authorized (BPPT-20000726AAY) operations of K21FP on channel 21 at Bakersfield, California, the pending application (BMJP TTL-20000829ASI) for K50CL on channel 21 at Belridge, California, and the licensed operation of KJNC-CA on channel 36 at Paso Robles, California (BLTTL-19870602IA). However, based on the provisions of the OET-69 Bulletin as permitted by FCC rules [Section 74.707(e)] it is believed that KBFK-LP's proposed operation complies with the FCC's interference criteria towards these operations. Specifically, calculations have been made using the procedures outlined in the FCC's OET-69 Bulletin and a 1 square kilometer grid. The results of the OET Bulletin No. 69 are tabulated on Figure 3 and, as indicated, the KBFK-LP proposal complies with the FCC's 0.5% interference threshold criteria towards K21FP, K50CL and KJNC-CA.

¹ The du Treil, Lundin & Rackley, Inc. DTV interference analysis program is based on the program and procedures outlined by the FCC in the Sixth Report and Order; subsequent Memorandum Opinion and Order; and FCC OET Bulletin No. 69. A nominal grid size resolution of 1 km was employed. An Alpha based processor computer system was employed. The results have been found to be in very close agreement with the results of the FCC implementation of OET Bulletin No. 69.

Environmental Protection Act

The proposed KBFK-LP facilities were evaluated in terms of potential radiofrequency radiation exposure at ground level in accordance with OST Bulletin No. 65, "Evaluating Compliance With FCC-Specified Guidelines for Human Exposure to Radiofrequency Radiation." The calculated power density at the base of the tower was calculated using the appropriate equation on Page 13 of the Bulletin. As shown on Figure 4, the vertical plane field values at depression angles toward the tower base (-60 to -90 elevation) are less than 0.2. Therefore, using a greater than expected vertical relative field value of 0.2, a visual effective radiated power of 150 kilowatts and 10 percent aural power, the calculated power density at 2 meters above ground at the tower base will be 1.5661 mW/cm^2 . This is 388% of the recommended limit of 0.40 mW/cm^2 for channel 36 applicable to general population/uncontrolled exposure areas and 78% of recommended limit of 2.02 mW/cm^2 for channel 36 applicable to general population/uncontrolled exposure areas. Therefore, as this is a multi-user site, measurements will be made to substantiate compliance with the RF emission rules.

Access to the transmitting site will be restricted and appropriately marked with warning signs. Furthermore, as this is a multi-user site, an agreement will be in effect in the event that workers or other authorized personnel enter the restricted area or climb the tower to ensure that appropriate measures will be taken to assure worker safety with respect to radio frequency radiation exposure. Such measures include reducing the average exposure by spreading out the work over a longer period of time, wearing "accepted" RFR protective clothing and/or RFR exposure monitors or scheduling work when the stations are at reduced power or shut down.

du Treil, Lundin & Rackley, Inc.

Consulting Engineers

Page 4
Bakersfield, California

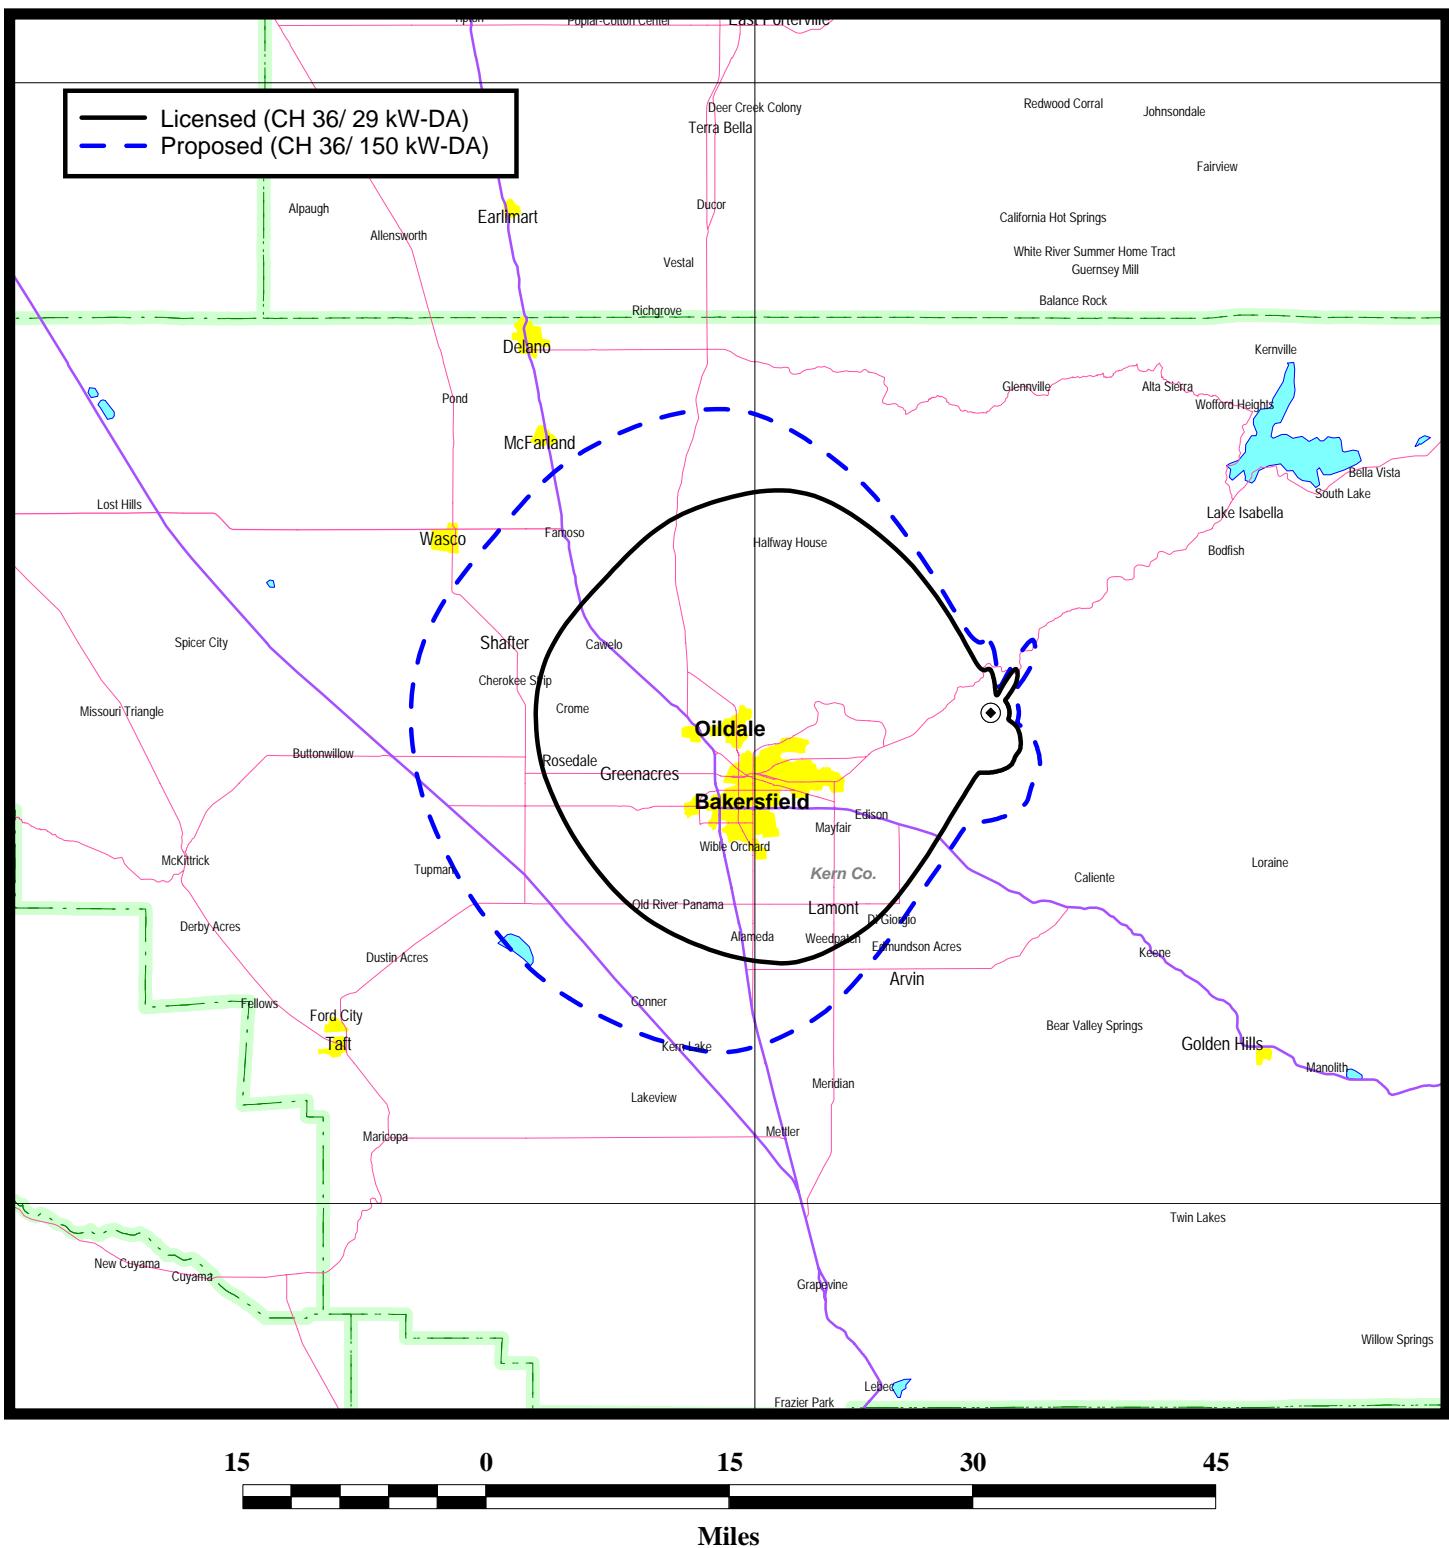

In addition, it appears that the existing tower is otherwise excluded from environmental processing as it complies with all the criteria for such an exclusion in Section 1.1306.
