

EXHIBIT 11

This narrative exhibit is submitted to demonstrate that this proposal fully complies with the interference criteria set forth in Section 74.1204 of the Commission's rules. Attached at exhibit 12 are a spacing study and maps demonstrating clearly that there is no prohibited overlap between this proposal and any other FM services. The attached FM spacing study demonstrates that this proposal would be fully spaced even as a full power Class A FM station to all but five other FM facilities. The attached maps demonstrate that there is no prohibited contour overlap between these five stations and the instant proposed FM translator facilities. One FM translator has also been included on the maps because of its proximity to the proposed facilities. As demonstrated in these maps no prohibited overlap with these stations is predicted.

The six facilities that have been included on the attached maps are: WKSB, 102.7, Williamsport, PA (54 dBu contour to proposed 34 dBu interference contour); WWFS, 102.7, New York, NY (54 dBu contour to proposed 34 dBu interference contour); New-FM, 102.9, Narrowsburg, NY (60 dBu contour to proposed 54 dBu interference contour); WFEZ, 103.1, Avoca, PA (60 dBu contour to prop. 100 dBu int. contour); WDMT, 102.3, Pittston, PA (60 dBu contour to proposed 100 dBu interference contour); and W274AO, 102.7, Clarks Summit, PA (60 dBu contour to proposed 40 dBu interference contour).

W277BQ 102.7 Dunmore, PA Interference Analysis, Blown Up is a map included to more clearly demonstrate that no proposed overlap exists between this proposal's 100 dBu interference contour and the 60 dBu coverage contours of WFEZ, Avoca, PA and WDMT, Pittston, PA and this proposal's 40 dBu interference contour and the 60 dBu coverage

contour of W274AO, Clarks Summit, PA. A scale of kilometers has been included on the maps. These maps were drawn to scale using the rfSoftware series of computer programs.
