

Exhibit E-11

This exhibit is included to demonstrate compliance with the requirements of the sections of the Commission's Rules under item 7 of the Tech-Box portion of FCC Form 301.

- 73.24(e) – The proposed facility complies with this section of the rules. The proposed daytime operation in an increase in transmitter power for the existing antenna system. No change is proposed to the nighttime operation other than a correction of the array coordinates.
- 73.24(g) – There is no physical change proposed to the nighttime operation of the facility. This application seeks to correct the nighttime geographic coordinates. In the case of the daytime operation, Census data indicate that the number of residents within the 1000 mV/m contour is 183 persons. Although this number is less than 300 persons, the proposed facility would comply with this section of the Commission's Rules as 368,785 persons reside within the predicted 25 mV/m contour.
- 73.33 – The proposed facility is in compliance with this section of the Rules as a definite site is specified for the facility. The data to demonstrate compliance with the provisions of the construction permit will be submitted as part of the license application.
- 73.45 – The efficiency of the proposed directional antennas complies with the requirements for the class of station. The applicant will comply with all other applicable portions of this section of the Commission's Rules.
- 73.150 – The authorized nighttime pattern complies with this section of the Commission's Rules. The daytime pattern is also in compliance with this section. All calculations pertinent to the proposed daytime pattern were determined in accordance with the equations contained in this section.
- 73.152 – The authorized nighttime pattern is not augmented, hence this section of the rules is not applicable for the nighttime operation. In the case of the daytime operation, the applicant will comply with this section as necessary following construction. It is not anticipated that augmentation of the proposed daytime pattern will be required at this point, although the licensed daytime pattern is augmented.
- 73.160 – Both the licensed nighttime pattern and the proposed daytime pattern comply with this section of the Commission's Rules.

- 73.182(a)-(i) – The facility complies with all of the engineering standards of allocations contained in the referenced sections of the Commission's Rules.
- 73.186 – The proposed daytime facility will comply with this section of the Rules as applicable. Since no actual physical change is being made to the nighttime operation, this section is not applicable in that case.
- 73.189 – The authorized and proposed antenna systems for this facility comply with this section of the Commission's Rules.
- 73.1650 – There is no change in the nighttime operation of KLO, hence this section is moot at this time. The proposed daytime operation will, however, comply with all applicable international agreements.
