

**W248AO
APPLICATION FOR MINOR CHANGE**

This technical report has been developed in support of an application for a minor modification to FM translator W248AO requesting a change in site, HAAT and ERP. The translator will serve as a fill in for station WWMX-FM's HD-2 channel.

Allocation exhibits are provided as required by FCC form 349 as follows:

- E1 Interference channel study**
- E1A Interference plot to WLTF**
- E1B Interference study to WIYY 2nd adjacent channel 250B**
- E1C Interference study to WASH on 2nd Adjacent channel 246B**
- E1D Interference plot to WRYP-LP on channel 248L1**
- E1E Horizontal pattern**
- E1F Vertical elevation pattern**
- E2 54 dBu and 60 dBu plots**
- E3 HAAT tabulation**
- E4 Aerial photograph of interference area**
- E5 ASR**

Exhibit E1 demonstrates clearance to all facilities with the exception of 2nd adjacent channel stations WIYY and WASH which are addressed below, and two applications that are dismissed concurrent with the filing of this application -- BNPFT20030317GQA at Crownsville, MD and BNPFT-20030317IXP at Severna Park, MD. Exhibit E2 shows that the proposed 54 dBu is contained within the primary station's 54 dBu, and that the proposed W248AO facility's 60 dBu overlaps the licensed W248AO's 60 dBu. The FCC 30 second terrain database provided by V-Soft Communications has been used throughout this study.

The proposed W248AO channel 248 facility will be located inside the protected contours of second adjacent channel stations WIYY and WASH. Therefore, an interference analysis has been conducted based on the D/U ratio of +40 dB at the proposed site. The WIYY contour at that site is 132 dBu and the proposed interference contour of 172 dBu (50,10) is 0.00 km, clearly not an interference issue. The WASH (50,50) contour at the proposed W248AO facility is 96.85 dBu or 1,593.9 meters. When the depression angle of 6.55 degrees based on the mounting height of 183 meters AGL is

Anderson Associates

considered the ERP reduces to 0.113 kW yielding an interfering 96.85 dBu (50,10) contour of 1,071.6 meters.

This interference contour has been evaluated at every five degrees of depression angle to establish the vertical clearance from the interfering contour to ground level. The proposed tower is located in suburban Baltimore. The immediate surrounding area within the proposed interfering contour does not contain any high rise buildings. An aerial photograph is included as E4 demonstrating that there are no buildings of sufficient height within the 1,071.6 km radius that their highest occupied floor would receive interference based on a minimum clearance of 60.8 meters or 199.5 feet. Based on this showing that the interfering contour will not reach a populated area, a waiver of Section 74.1204 is requested.

Vertical clearance is demonstrated in the following table.

| Depression Angle (Deg) | F | ERP X F² kW | 96.85 dBu meters | Vertical Clearance to ground meters |
|-------------------------------|----------|-----------------------------------|-----------------------------|--|
| 6.55 | 0.6725 | 0.113 | 1,071.6 | 60.8 |
| 10 | 0.373 | 0.035 | 596.4 | 79.4 |

| 90 | 0.001 | 0.00000 | 0.0 | 183.0 |

Proposed site, antenna and RF calculation:

The proposed facility will utilize a Dielectric DCRM-8C, half-wave spaced antenna mounted at 183 meters AGL. The RF contribution for the proposed facility at

Anderson Associates

ASR#1044237 has been calculated to be 0.002 $\mu\text{Watts}/\text{cm}^2$ using the formula provided below and a worst case vertical factor of 0.061 at 60 degrees depression angle (see elevation pattern at E1F). This is 0.001% of of the maximum permissible 200 micro-Watts/ cm^2 exposure for general population/uncontrolled exposure and less than the 5% of that level that is excluded from consideration.

$$S \text{ (RF in micro-Watts/cm}^2\text{)} = \frac{33.4 (F^2 - \text{Vert Factor}) X (H \text{ ERP} + V \text{ ERP in Watts})}{R^2 \text{ (distance to radiation center in meters)}}$$

Registration Detail

| | | | |
|----------------|----------------|-------------|------------|
| Reg Number | 1044237 | Status | Granted |
| File Number | A0164383 | Constructed | 01/01/1987 |
| FAA Study | 98-AEA-3546-OE | EMI | No |
| FAA Issue Date | 05/26/1999 | NEPA | No |

Antenna Structure

Structure Type TOWER - Free standing or Guyed Structure used for Communications Purposes

Location (in NAD83 Coordinates)

Lat/Long 39-20-10.0 N 076-38-58.0 W 3900 HOOPERAVE
City, State BALTIMORE , MD
Center of AM Array

Heights (meters)

| | |
|--|---|
| Elevation of Site Above Mean Sea Level | Overall Height Above Ground (AGL) |
| 82.0 | 390.1 |
| Overall Height Above Mean Sea Level | Overall Height Above Ground w/o Appurtenances |
| 472.1 | 389.2 |

Painting and Lighting Specifications
