Federal Communications Commission

RE: WDTV-FM, Rutland, VT Facility ID: 14719

This letter is written in connection with Construction permit BPH-20081118AAU granted March 27, 2009, and with regard to condition 2 and 3 of the permit.

Be advised that the undersigned personally supervised the assembly, mounting and rotation of the Shively model 6810-2R-SS-DA, serial number 27758-A as specified in the installation drawing number 97412 dated September 15, 2009. This antenna was mounted on a 6 5/8 inch OD mast and rotated such that the axis of a line extended from the feed line mount assembly through the front of the antenna elements was oriented at an azimuth of 60 degrees true with the horizontal parasitic elements aligned exactly perpendicular to this axis.

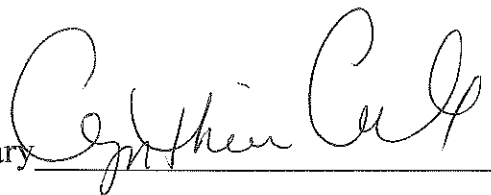

A survey line and monument was set North 60 degrees East at 200 feet from the base of the tower by Robert Tinker, a licensed surveyor, from which the antenna alignment was determined. His statement is attached and made part of this letter.

Should the applicant or the Commission have any questions relative to this statement, please contact the undersigned.

Respectfully,

Dave W. Groth
