PROPOSED NEW (FM) CH 224C2 PINE KNOLL SHORES, NORTH CAROLINA**

**FEBRUARY 2007**

**SUMMARY**

The following engineering statement has been prepared on behalf of **Tower Investment Trust, Inc.** (“Tower”), applicant for a new FM station at Ocracoke, North Carolina, FCC ID 170178. The facilities specified herein, and in FCC Form 301, Section III-B, are mutually exclusive with the allotment coordinates for Channel 224C1 at Ocracoke, North Carolina and thus are believed to be in compliance with the minor modification Rules established in *MM Docket No. 05-210* released November 29, 2006. Tower proposes to delete CH224C1 at Ocracoke, North Carolina and specifies CH 224C2 at Pine Knoll Shores, North Carolina. The proposed community of license change is believed to be in the public interest but is also made out of necessity. There are no existing towers that meet FCC allocation criteria which would provide 70 dBu service to Ocracoke, North Carolina on CH 224C1. The Ocracoke CH224C1 allotment site area is not suitable for tall tower construction due to its small size and location along the coastline in areas that are in, or adjacent, to the National Seashore.

The application public interest merits are summarized as follows. A more detailed discussion is in a separate exhibit.

1. The community of Ocracoke, North Carolina has a population of 769 persons<sup>1</sup>. No AM or FM stations are licensed to Ocracoke, North Carolina .
2. The town of Pine Knoll Shores, North Carolina has a population of 1,524 persons. No AM or FM stations are licensed to Pine Knoll Shores, North Carolina.
3. The proposed Channel 224C2 allotment site at Pine Knoll Shores, North Carolina complies with the Commission’s allotment spacing rules for a fully spaced Class C2 facility.

---

<sup>1</sup> All population data from 2000 U.S. Census unless otherwise stated.

4. The proposed new allotment at Pine Knoll Shores, North Carolina would bring a first local aural service to that community.

### **URBANIZED AREA**

Based on U. S. Census data, no Urban Areas are associated with the allotment or proposed facilities. Neither the licensed facility 70 dBu nor the proposed 70 dBu covers a Census designated Urban Area.

### **POPULATION DATA – ALLOTMENT**

The licensed and proposed 70 dBu and 60 dBu population data is listed below. The population data is based on 2000 Census data with the contour locations based on a constant radius appropriate for the class of FM facility.

<u>Facility</u>	Population - Persons		Area - Sq. kM	
	<u>70 dBu</u>	<u>60 dBu</u>	<u>70 dBu</u>	<u>60 dBu</u>
Ocracoke, NC Allotment	88,985	162,476	7,844	16,265
Pine Knoll Shores, NC Allotment	45,798	97,045	3,213	8,484

### **POPULATION DATA – ALLOTMENT & PROPOSED FACILITIES.**

The proposed 70 dBu and 60 dBu population data are listed below. The population data are based on 2000 Census data with the contour locations based on 72 evenly spaced radials computed using the Radio Soft 3 second (NGDC Based) high accuracy 3 second terrain database for FM stations. Distances to FM contours were determined using the methodology found in 73.313.

<u>Facility</u>	Population - Persons		Area - Sq. kM	
	<u>70 dBu</u>	<u>60 dBu</u>	<u>70 dBu</u>	<u>60 dBu</u>
Proposed	40,910	102,479	3,379	8,533

### **PROTECTED AURAL SERVICE**

Ocracoke, North Carolina, the current CH 224C1 allotment community , receives protected aural service from 2 FM radio stations and 3 AM stations. Pine Knoll Shores, North Carolina, the proposed community

of license, receives protected aural service from a minimum of 10 FM radio stations. This analysis is based on FM services to 100% of the allotment community. In no case is either community underserved and there are a minimum of 5 aural services to all portions of the loss area as depicted on map *Figure 4*.

### **GAIN AND LOSS AREAS**

The loss area will encompass 7,781 square kilometers and a population of 65,431 persons. It is noted that there is no actual loss of service as there has never been a licensed facility for CH224C1 at Ocracoke, North Carolina.

### **ALTERNATE PREDICTION METHODOLOGY**

To determine the **Tower** proposed signal level over the allotment community of Pine Knoll Shores it is necessary to employ an alternate prediction methodology as the 70 dBu contour, using 73.313 methodology, does not envelop the proposed community of license. NBS Tech Note 101 (Longley-Rice) is employed here as the primary supplemental prediction method to the 73.313 contour prediction methodology. The FCC Media Bureau, in coordination with OET, has established guidelines for use of the Longley-Rice method. The guidelines are enunciated in a letter dated August 8, 2002 from the Media Bureau concerning KMAJ-FM, Topeka, Kansas, Facility ID 42012, Application BPH-20000316ACF and accessible on the Audio Division web page.

Use of the Longley-Rice prediction model is believed appropriate for analyzing the signal level provided to the community of Pine Knoll Shores for the proposed facilities based on the following facts.

The terrain in the applicable coastal plane of North Carolina is commonly acknowledged to be extremely flat and regular. *Figure 5* is a topographical map depicting the proposed transmitter site with the 230, 232, 234, 236, 238 and 240 degree radials. Each radial passes over bodies of water and low marsh land to reach the community which is located on an island in the Atlantic Ocean.

The FCC test for use of Longley-Rice are listed below:

- 1) The FCC has established that the Delta h must depart widely from the 50 meter standard and be 20 meters or less or 100 meters or more. In the case of the proposed facilities, the Delta h on the radials which cross Pine Knoll Shores (230-240 degree) are all 0 meters.
- 2) Distance to the 73.313(a) computed 70 dBu contour must be at least 10% different than the distance to the 20 dBu based on Longley-Rice. The 70 dBu 73.313 distance on the pertinent radials is 32.87 kilometers while the Longley Rice predicted 70 dBu occurs at a minimum distance of 43 kM (See Table IV). This is a difference of 30.82%.
- 3) A list of assumptions must be supplied (Please see Table IV for Telecommunications Analysis Services printout).
- 4) A sample calculation using the supplemental procedure must be supplied (please see below).

#### **SUPPLEMENTAL 70 dBu ANALYSIS**

Figure 3 depicts the proposed 70 dBu contour based on 73.313(c) using 3 second terrain data at 5 degree evenly spaced radials. The RadioSoft 3 second terrain data was employed for the contour calculation.

Figure 5 is the 70 dBu F(50,50) contour location calculated using the Longley Rice methodology. It is seen that 100% of the community boundary lies well inside the Longley Rice 70 dBu.

#### **SAMPLE COMPUTATION**

Figure 5P is a plot of the terrain elevation from the site to the Pine Knoll Shores reference coordinates using the RadioSoft 3 second terrain data. The community reference coordinates are NAD 27 N.L. 34° 41' 50", W.L. 76° 48' 49".

This figure is offered to demonstrate distance and bearing to the community, that the community is near sea level, that the terrain is very flat and for computation purposes.

The basic formula for calculation of signal strength is obtained from NBS Technical Note 101, Transmission Loss Predictions For Tropospheric Communications Circuits, revised May 1966.

$$\text{dBuV/m} = 106.92 - 20 (\log d)$$

d = distance in kilometers

To determine Field Strength in dBuV/m, the path specific data must be applied:

Lbd = basic diffraction transmission loss (obstruction loss)

ERP = Effective radiated power in dBkW relative to a dipole

A = Excess path loss from fresnel zone loss and clutter loss

The final formula becomes:

$$\text{dBuV/m}^2 = 106.92 - 20 (\log d) + \text{ERP} - \text{Lbd} - A$$

For the proposed facility the sample computation values, related to *Figure 5P*, are:

d = 34.9 kM

Lbd = 0 dB

ERP = 14.15 dBk

A = 5.8 dB fresnel loss  
5 dB clutter loss (Value obtained from discussion with OET)

$\text{dBuV/m} = 106.92 - 30.9 + 14.15 - 5.8 - 5$

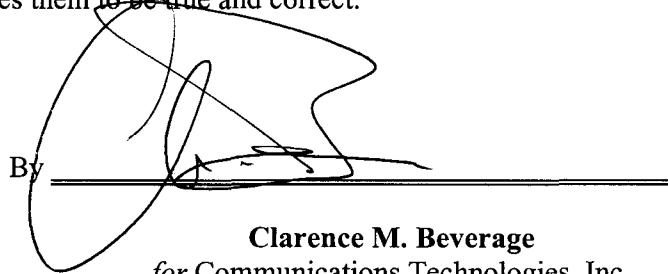

$\text{dBuV/m} = 79.4 \text{ dBu}$

### **73.215 - REQUEST FOR WAIVER**

73.215 processing is requested with regard to WERO, CH 277C. The proposed site to site distance is 97 kM which exceeds the 73.215 minimum allowable value of 96 kM. However, with WERO considered as a full Class C facility the proposed 100 dBu F(50,10) contour and the 60 dBu F(50,50) contour for WERO CH 227C, Washington, NC are in involved in a small area of overlap as depicted on *Figure 6*. The overlap area is 4.7 square kilometers and the population in the area is 0 persons based on a detailed centroid count. The 4.7 square kilometer area is 0.0178% of the 26,466 square kilometer area in the WERO 60 dBu. The overlap area, based on review of satellite data is protected marshlands with some adjacent farmed land.

**CONCLUSION**

The foregoing was prepared on behalf of **Tower Investment Trust, Inc.** by Clarence M. Beverage of *Communications Technologies, Inc.*, Marlton, New Jersey, whose qualifications are a matter of record with the Federal Communications Commission. The undersigned certifies, under penalty of perjury, that the statements herein are true and correct of his own knowledge, except such statements made on information and belief, and as to these statements he believes them to be true and correct.

Communications System Coverage	Model
Input Summary	
14-Feb-07 16:09:22	
<hr/>	
1) Model:	Point-to-point irregular terrain
model	
2) Output option:	Field intensity
3) Length units:	Metric (km and m)
4) Service Application:	Broadcast
5) Results option:	WWW
6) Location variability:	50.00 %
7) Time availability:	50.00 %
8) Situation variability:	50.00 %
10) Frequency:	92.700 MHz
11) Polarization:	Horizontal
12) Conductivity:	0.005 S/m
13) Dielectric constant:	15.0
14) Climate zone:	Continental temperate
20) Transmitter name:	PROPOSED
21) Transmitter location:	
Latitude	Longitude
Deg N	Deg W
34.8834 34N, 53, 0.4	-76.5059 76W, 30, 21.3
22) Xmtr site elevation:	2.0 m      6.6 ft
23) Xmtr ant ht AMSL:	209.30 m      686.68 ft
23) Xmtr ant ht AGL:	207.30 m      680.12 ft
24) Transmitter radiation option:	ERP
29) Effective Radiated Power:	26000.0 W
Effective Isotropic Radiated Power:	42655.3 W
30) Transmitter ant horiz pattern:	Omnidirectional
32) Transmitter ant vert pattern:	Omnidirectional
40) Rcvr ant ht above ground:	9.10 m      29.86 ft
50) Man-made noise environment:	Quiet rural
62) Analysis center:	
Latitude	Longitude
Deg N	Deg W
34.8834 34N, 53, 0.4	-76.5059 76W, 30, 21.3
66) Field intensity contour levels:	
1)	68.00 dBuV/m
2)	69.00 dBuV/m
3)	70.00 dBuV/m
67) Coverage study starting azimuth:	225.0 deg
67) Coverage study ending azimuth:	240.0 deg
67) Coverage study azimuth increment:	1 deg
69) Coverage limits:	maximum_Full_Listing
68) Analysis radius:	50.00 km      31.07 mi

Distance to Contours (KM)

NOTE: \*\*\*\*\* indicates contour not found!
