

WCPE-FM

Application for STA

Exhibit 4

All guy wires of the tower will be replaced. Workers will be moving from bottom to top of the tower.

ERP must be lowered to maintain safety of workers from excess radiation. This requires variance from the requirement of maintaining power between 90% and 105%.

Public interest is furthered by rendering the tower reliable to standard TIAA222G.

The expected duration of the STA is from August 1<sup>st</sup> to October 30<sup>th</sup> 2011.

The plan for return to licensed operation is "Main transmitter to main antenna at licensed power". This will be implemented after all rigging and personnel are off the tower.
