Technical Narrative

This Technical Exhibit supports an application for modification of construction permit for digital station WCTX-DT on channel 39 at New Haven, Connecticut. Specifically, this application will modify the WCTX-DT authorized construction permit (BMPCDT-20020305AAE) by changing the directional antenna system, decreasing the antenna radiation center height above average terrain (HAAT), and increasing the maximum directional effective radiated power (ERP). No other changes are proposed.

Station WCTX-DT is currently authorized for operation on channel 39 with a directional antenna maximum ERP of 100 kilowatts and an HAAT of 333 meters. It is proposed to operate with a maximum directional ERP of 170 kilowatts, an HAAT of 301 meters, and to replace the authorized antenna with a Dielectric TFU-16DSB-B(C) antenna.

A sketch of antenna and pertinent elevations are included as Figure 1. The FCC antenna registration number for the existing tower is 1043980.

Figure 2 is data for the Dielectric TFU-16DSB-B(C) directional antenna. A graph and tabulation of both

the horizontal and vertical antenna relative field patterns are included.

There are no known full service AM stations within 5 kilometers (3 miles) of the WCTX-DT transmitter site. The following is a list of authorized full service FM and TV stations within 16 kilometers (10 miles) of the proposed DTV site. Although no adverse electromagnetic impact is expected, the applicant recognizes its responsibility to correct problems which are a result of its proposed DTV operation.

<u>Station</u>	<u>Channel</u>	<u>Bearing (°True)</u>	<u>Distance (km)</u>
WPLR(FM), New Haven, CT	256B	0	0.0
WKCI-FM, Hamden, CT	267B	22	1.3
WYBC-FM, New Haven, CT	232A	192	8.3
WNHU(FM), West Haven, CT	204A	183	14.6
WRXC(FM), Shelton, CT	211A	243	15.1
WTNH-DT, New Haven, CT	10	0	0.0
WTNH(TV), New Haven, CT	08	0	0.0
WCTX(TV), New Haven, CT	59	9	0.0
WEDY-DT, New Haven, CT	6	160	11.1
WEDY(TV), New Haven, CT	65	160	11.1
WTXX(TV), Waterbury, CT	20	332	11.9
WSAH(TV), Bridgeport, CT	43	243	15.1

The proposed transmitter site is 399 kilometers from the closest point of the Canadian border. The proposed DTV site is approximately 2571 kilometers from the closest point of the Mexican border. The closest FCC monitoring station is at Canandaigua, New York, approximately 392 kilometers to the northwest. The proposed DTV site is outside the National Radio Quiet Zone (VA/WVA), the closest point being more than 520 kilometers to the west-southwest. The closest point of the Table Mountain Radio Quiet Zone (CO) is more than 2700 kilometers to the west. The closest radio astronomy site operating on

TV channel 37 is at Hancock, New Hampshire, over 185 kilometers to the north-northeast. These separations are sufficient to not be a concern for coordination purposes.

Figure 3 is a map showing the predicted 41 dBu f(50,90) and 48 dBu f(50,90) contours for the proposed WCTX-DT operation. The extent of the contours has been calculated using the normal FCC prediction method and employing the N.G.D.C. 30-second terrain database. The New Haven city limits were derived from information contained in the 2000 U.S. Census for Connecticut.

Figure 4 is a DTV channel 39 separation study toward other NTSC and DTV allotments based on a 161 kilometer "buffer". Although the separation requirements are only applicable to new DTV allotments, they can be used as an indication of which stations have the potential of receiving interference from the proposed channel 39 DTV operation.

An interference analysis has been conducted using the procedures outlined in the FCC's OET-69 bulletin which demonstrates that the proposal complies with the interference protection provisions of Section 73.623(c)(2).¹ Interference calculations for the proposed WCTX-DT operation are summarized below.

¹ The du Treil, Lundin & Rackley, Inc. DTV interference analysis program is based on the program and procedures outlined by the FCC in the Sixth Report and Order; subsequent Memorandum Opinion and Order; and FCC OET Bulletin No. 69. A nominal grid size resolution of 1 km and a 0.5 km terrain increment were employed. A Unix based processor computer system was employed. The results have been found to be in very close agreement with the results of the FCC implementation of OET Bulletin No. 69.

Pending Application		No Interference Calculated

From the above, it is apparent that the proposed WCTX-DT operation on channel 39 complies with the FCC's interference standard towards all authorized analog and DTV assignments.

Using the procedures outlined in the FCC's OET-69 Bulletin, interference studies were prepared with respect to co-channel and first adjacent Class A LPTV stations along with Class A stations operating on taboo channels. Based on our analysis it was found that the proposed

WCTX-DT facility would not cause prohibited interference to any Class A LPTV stations. The results of the interference analyses for the proposed WCTX-DT facility are summarized below.

Protected Class A Station	FCC Service Population	Proposed Interference Population
W36AS, Ch. 39, Edison, NJ	No Interference Calculated	
WBVT-LP, Ch. 39, Burlington, VT	No Interference Calculated	
WL BX-LP, Ch. 46, Manhattan, NY	No Interference Calculated	
WRNN-LP, Ch. 46, Nyack, NY Authorized CP	No Interference Calculated	

From the above, it is apparent that the proposed WCTX-DT operation on channel 39 complies with the FCC's interference standard towards all Class A stations.

Consideration has been given to the RF emission rules whose implementation date was October 15, 1997. The vertical relative field pattern and tabulation for the proposed antenna are shown on Figure 2. Based on a conservative relative field factor of 0.15, the proposed power density at 2 meters above ground at the tower base will be 0.0037 mW/cm^2 , which is less than 5% of the recommended limit of 0.42 mW/cm^2 for channel 39, applicable to general population/uncontrolled exposure areas. Therefore, based on the responsibility threshold of 5%, the proposal will comply with the Commission's RF emission rules.

Access to the transmitting site will be restricted and appropriately marked with warning signs. As this is a proposed multi-user site, an agreement will control access to the site. In the event that workers or other authorized personnel enter restricted areas or climb the tower, appropriate measures will be taken to assure worker safety with respect to radio frequency radiation exposure. Such measures include reducing the average

du Treil, Lundin & Rackley, Inc.

Page 6

New Haven, CT

exposure by spreading out the work over a longer period of time, wearing "accepted" RFR protective clothing and/or RFR exposure monitors or scheduling work when the stations are at reduced power or shut down. The proposed operation appears to be otherwise categorically excluded from environmental processing.

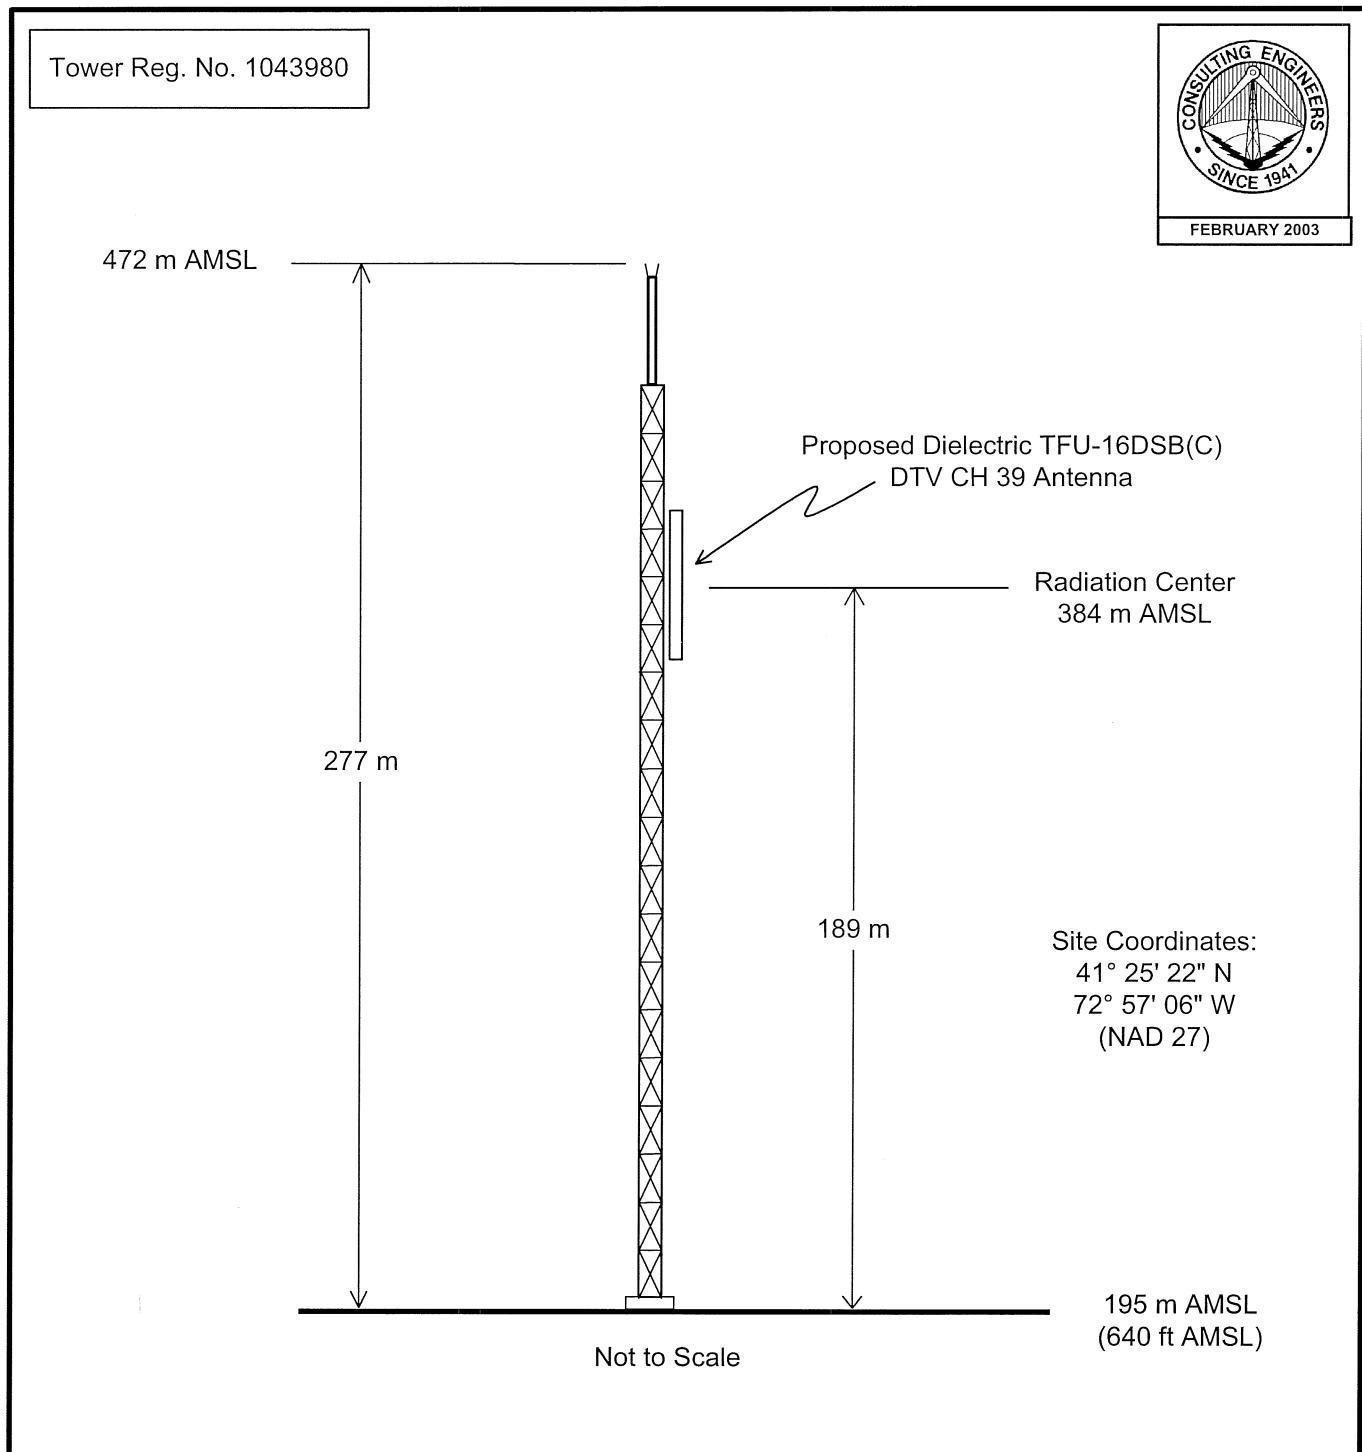

If there are questions concerning the technical portion of this application, please contact the office of the undersigned.
