**ENGINEERING TECHNICAL STATEMENT PREPARED BY WILLIAM T. GODFREY, JR.
OF THE FIRM KESSLER AND GEHMAN ASSOCIATES, INC., TELECOMMUNICATIONS
CONSULTING ENGINEERS IN CONNECTION WITH A MINOR AMENDMENT
APPLICATION (BPH-20110812ACP) FOR THE WYKE-FM FM BROADCAST FACILITY
LICENSED TO CITRUS COUNTY ASSOCIATION FOR RETARDED CITIZENS (“CCARC”).**

The firm Kessler and Gehman Associates, Inc. (“KGA”) has been retained by Citrus County Association For Retarded Citizens, Inc. (“CCARC”), Inglis, Florida, to prepare engineering studies and the engineering portion of a minor amendment to a pending application (BPH-20110812ACP) for the WYKE-FM, Channel 282, full-service, commercial FM broadcast facility. This “one-step upgrade” application requests 73.215 processing as well as FCC authorization to make the following changes: 1) modify station class from Class A to Class C3; 2) increase effective radiated power; and 3) change allotment reference point.

Discussion

The FCC accepted CCARC’s minor change in license application (BPH-20110812ACP) for filing on August 15, 2011 and sent a letter (Exhibit 1A) to CCARC on September 21, 2011 stating that an engineering study revealed that the proposed facility failed to meet the minimum spacing requirement of C.F.R. §73.207 because it was short-spaced by 11 km to the 1st-adjacent channel Class C licensed facility (BMLH-20031010ADD) of WTFS-FM, Cocoa Beach, FL. The FCC stated that the prohibited overlap occurs when WTFS-FM is considered as a maximum Class C facility operating with 100 kW ERP at 600 m HAAT as required by 47 C.F.R. §73.215(b)(2)(ii). Accordingly, the FCC stated that the overlap constitutes an acceptance defect and the application must be amended to demonstrate compliance with 73.215 with respect to WTFS-FM’s license BMLH-20031010ADD.

The software used by KGA to calculate and verify the minimum spacing requirements pursuant to §73.207 of the FCC rules is a program called FMCont which is a professional FM

allocation program created by V-Soft Communications. The spacing studies calculated using this program draw from the FCC's set of minimum spacing tables and has a function called "Max Class." When the Max Class function is turned on, the parameters for all applicable FM stations are increased to maximum class facilities pursuant to §73.215(b)(2)(ii) of the FCC rules. KGA always utilizes this function to ensure compliance with all spacing requirements; however, after reviewing the FCC's letter, KGA examined the engineering and determined that the WTKS-FM station's parameters were not increased to the maximum class (100 kW ERP at 600 m HAAT) even though the "Max Class" function was indeed turned on in the program. KGA requested an explanation from V-Soft and received an e-mail from the owner (Exhibit 1B) stating that the Max Class function in FMCont no longer works and that the program would have to be upgraded to the next generation "FMCommander" software in order to have a working Max Class feature.

The only way to resolve the spacing issue between the WTKS-FM facility at maximum class parameters and the proposed WYKE-FM facility is by utilizing a directional antenna. Accordingly, this amendment application proposes to change from a nondirectional antenna to a directional antenna. The requested modifications in the pending application with respect to changing station class, ERP, allotment reference point, and antenna height are still valid. In summary, CCARC proposes the following changes: 1) Increase station class from the licensed Class A to the proposed Class C3 via the "one-step" upgrade process; 2) Increase ERP from the licensed 4.4 kW to the proposed 19.0 kW; 3) change allotment reference points from Latitude N 29°-02'-45.0" and Longitude W 082°-40'-53.0" to Latitude N 29°-04'-51.0" and Longitude W 082°-47'-27.3"; and 4) Change antenna radiation center AGL from 116.0 m to 113.3 m. Also, CCARC hereby requests contour protection for short-spaced assignments pursuant to §73.215 of the FCC Rules.

Antenna Data

Exhibit 1 provides the operating parameters for the proposed WYKE-FM facility. Exhibit 2 is a profile view of the proposed antenna, support structure and elevations. Exhibits 3

and 4 are the antenna azimuth pattern and azimuth pattern tabulation respectively for the proposed antenna. Exhibits 5 and 6 are the antenna elevation pattern and elevation pattern tabulation respectively for the proposed antenna.

Transmitter Location

The licensed WYKE-FM facility is currently operating on the Shadavrus Capital Trust tower - Antenna Structure Registration Number (ASRN) 1045639. The tower's overall height is 138.7 m AGL. The licensed antenna is an ERI model LPX-4E side-mounted nondirectional antenna with an antenna height radiation center of 116.0 m AGL which equates to 114.7 m AAT. The proposed WYKE-FM facility will operate using a side-mounted directional antenna with an antenna height radiation center of 113.3 m AGL which equates to 112.0 m AAT. Exhibit 7 is a topographic map depicting the proposed WYKE-FM transmitter site.

Principal Community

Exhibit 8 is a principal community map depicting the proposed facility's 3.16 mV/m (70 dBuV/m) contour, boundaries, cardinal radials and a 64.64° radial depiction from the transmitter site through the center point of the principal community of Inglis, Florida. Exhibit 8 demonstrates pictorially that the entire principal community of Inglis, FL will be completely encompassed by the proposed facility's 3.16 mV/m principal community contour.

Exhibit 9 is a contour map depicting the WYKE-FM transmitter site and the licensed facility's F(50,50) 60.0 dBuV/m contour (green) as well as the proposed facility's F(50,50) 60.0 dBuV/m contour (red). It can be seen that the proposed facility will serve a much larger area and population than the licensed facility.

§73.210 & §73.211 – Station Class

Under §73.211, Class C3 FM stations must operate within a minimum ERP of 6 kW, a maximum ERP of 25 kW and a maximum antenna radiation center HAAT of 100 meters,

without exceeding a distance to the class contour of 39 km. The proposed WYKE-FM facility will operate with an ERP of 19.0 kW at an antenna radiation center HAAT of 112.0 m. Since the proposed facility's ERP is greater than the minimum ERP defined in §73.211(a) and the HAAT is greater than the maximum antenna HAAT specified in §73.211(b), the class of the station is determined pursuant to §73.210(b)(3)(i).

Section 73.210(b)(3)(i) of the FCC rules states that an FM station is a Class C3 if the reference distance to its class contour is greater than 28 km and less than or equal to 39 km. Section 73.211(b)(1)(i) states that the reference distance is obtained by finding the predicted distance to the 1 mV/m contour (60 dBu) and then rounding to the nearest km. Exhibit 10 depicts the proposed WYKE-FM facility's reference distance to its class contour in ten degree increments pursuant to Figure 1 of Section 73.333 of the FCC rules. Referring to Exhibit 10, it can be seen that the greatest distance is 39.3 km which rounds to 39 km and therefore, complies with Section 73.210 and 73.211 of the FCC rules. Exhibit 11 depicts the WYKE-FM "Max Class" facility's reference distance to its class contour in ten degree increments pursuant to Figure 1 of Section 73.333 of the FCC rules based on an ERP of 25 kW at an antenna height radiation center of 100 m AAT (Max Class for C3). Exhibit 12 is a formula spreadsheet which subtracts the C3 Max Class distance to contour values (depicted in Exhibit 11) from the proposed WYKE-FM facility's distance to contour values (depicted in Exhibit 10). If any of the proposed WYKE-FM facility's distance to contour values (depicted in Exhibit 10) are greater than the C3 Max Class distance to contour values (depicted in Exhibit 11), the spreadsheet will indicate "FAIL" and if any of the proposed WYKE-FM facility's distance to contour values (depicted in Exhibit 10) are less than or equal to the C3 Max Class distance to contour values (depicted in Exhibit 11), the spreadsheet will indicate "PASS." Referring to Exhibit 12, it can be seen that all 36 azimuths received a "PASS" which means the proposed WYKE-FM facility's distance to contour values (depicted in Exhibit 10) are less than or equal to the C3 Max Class distance to contour values (depicted in Exhibit 11) which demonstrates that the Class C3 threshold was not exceeded in any azimuthal direction. The last column in the formula spreadsheet depicts the difference between the proposed WYKE-FM facility's distance to contour values (depicted in

Exhibit 10) and the C3 Max Class distance to contour values (depicted in Exhibit 11). It can be seen that the proposed WYKE-FM facility's distance to contour values (depicted in Exhibit 10) are less than the C3 Max Class distance to contour values (depicted in Exhibit 11) in all azimuthal directions. Accordingly, it has been demonstrated that the proposed WYKE-FM facility should be classified as a Class C3.

§73.207 & §73.215 Studies – Request to use 3 arc second terrain

Exhibit 13 is a spacing study demonstrating that the proposed WYKE-FM Class C3 facility is separated from all other allotments and assignments on the same channel (co-channel), and five pairs of adjacent channels (200 kHz, 400 kHz, 600 kHz, 10.6 MHz & 10.8 MHz) by not less than the minimum distances specified in §73.207 of the FCC Rules, with exception of the WTKS-FM first-adjacent channel facility which is short-spaced by 10.6 km (also see Exhibit 17). However, based on §73.215 of the FCC Rules, the Commission will accept applications that specify short-spaced antenna locations (locations that do not meet the domestic co-channel and adjacent channel minimum distance separation requirements of §73.207); provided that, such applications propose contour protection with all short-spaced assignments, applications and allotments. Exhibit 14 is an FM interference study which demonstrates that the proposed WYKE-FM Class C3 facility meets all contour protection requirements to all applicable stations, including the licensed WTKS-FM Channel 281 Class C facility¹ at maximum Class C parameters (100 kW ERP at 600 m HAAT).

¹ *Note:* Section 73.211(b)(1)(i) of the FCC rules states the following: "The reference distance of a station is obtained by finding the predicted distance to the 1 mV/m contour using Figure 1 of Section 73.333 and then rounding to the nearest kilometer." It was determined that the distance from the WYKE-FM transmitter site to the WTKS-FM transmitter site is 164.9 km which rounds to 165.0 km based on Section 73.211(b)(1)(i). Section 73.215(e) of the FCC rules states that the minimum distance separation requirement for a 1st-adjacent channel Class C3 to C situation is 165.0 km. Therefore, the proposed WYKE-FM Class C3 and licensed WTKS-FM Class C facility's minimum distance separation requirement is met.

NOTE The interference study depicted in Exhibit 14 was calculated using 3 arc second terrain; therefore, **CCARC respectfully requests that the Commission evaluate interference using 3 arc second terrain.** All 3 arc second terrain data used for this application has been provided as exhibits herein.

§73.215 also states that each application to be processed pursuant to this section must specifically request such processing on its face, and must include the necessary exhibit to demonstrate that the requisite contour protection will be provided. Accordingly, **CCARC hereby specifically requests §73.215 processing** and Exhibit 14 demonstrates that the requisite contour protection is provided. Jumping ahead to Exhibit 24, it can be seen that the public interest will be served since the proposed facility will serve an additional 28,135 persons.² In addition, Exhibit 18 pictorially demonstrates that the proposed WYKE-FM Class C3 facility's protected F(50,50) 60.0 dBuV/m contour (blue) is not overlapped by the WTKS-FM facility's F(50,10) 54.0 dBuV/m predicted interfering contour (red) in any azimuthal direction. Exhibit 14 demonstrates that the proposed WYKE-FM Class C3 facility's F(50,10) 54.0 dBuV/m interfering contour does not overlap the WTKS-FM facility's F(50,50) 60.0 dBuV/m protected contour, at the maximum class for a Class C station (100 kW at 600 m HAAT), in any azimuthal direction (+29.9 km margin). Therefore, this application complies with §73.215 of the FCC Rules.

Suitable Allotment Site (Hypothetical)

The Note to §73.203 states that non-reserved band applications requesting changes in channel and/or class and/or community must meet either the minimum spacing requirements of §73.207 at the site specified in the application, without resort to §73.213 through §73.215, or demonstrate the existence of a suitable allotment site that fully complies with §73.207 and §73.315 without resorting to §73.213 through §73.215. Since this application proposes a change in class and relies on §73.215 to meet the spacing requirements, it must be demonstrated that a suitable allotment site exists that fully complies with §73.207 and §73.315 without resorting to

² Calculated using U.S. Census 2000 data

Kessler and Gehman Associates, Inc.

Telecommunications Consulting Engineers

§73.213 through §73.215. As demonstrated in Exhibits 15, 16 and 19, a suitable allotment site exists that fully complies with §73.207 and §73.315 without resorting to §73.213 through §73.215.

Exhibit 15 depicts the results of a spacing study that was run with the WYKE-FM facility located at the proposed allotment site (hypothetical site). This Exhibit demonstrates that the proposed allotment site is suitable because it is separated from all other allotments and assignments on the same channel (co-channel), and five pairs of adjacent channels (200 kHz, 400 kHz, 600 kHz, 10.6 MHz & 10.8 MHz) by not less than the minimum distances specified in §73.207 of the FCC Rules (also see Exhibit 19). Therefore, the proposed hypothetical allotment site fully complies with §73.207 without resorting to §73.213 through §73.215.

Exhibit 16 is a contour map demonstrating that the designated WYKE-FM Class C3 suitable allotment facility's F(50,50) 70 dBuV/m contour (3.16 mV/m) will fully encompass the principle community of Inglis, FL. Therefore, the allotment site (hypothetical site) at Latitude N 29°-04'-51.0" and Longitude W 082°-47'-27.3" is a suitable site since it fully complies with §73.207 and §73.315 without resorting to §73.213 through §73.215 of the FCC Rules.

Exhibit 20 depicts the 3 arc second terrain data used to calculate the proposed WYKE-FM F(50,50) 60.0 dBuV/m contour and Exhibit 21 depicts the 3 arc second terrain data used to calculate the proposed WYKE-FM F(50,10) 54.0 dBuV/m interfering contour. Exhibit 22 depicts the 3 arc second terrain data used to calculate the licensed WTKS-FM F(50,50) 60.0 dBuV/m contour (at max class: 100 kW ERP & 600 m HAAT) and Exhibit 23 depicts the 3 arc second terrain data used to calculate the licensed WTKS-FM F(50,10) 54.0 dBuV/m interfering contour (at max class: 100 kW ERP & 600 m HAAT).

Area and population Analysis

The population counts within the licensed and proposed 1 mV/m contours (60.0 dBuV/m) were determined using U.S. Census 2000 data. The area and population gain within the

proposed WYKE-FM 1 mV/m contour is predicted to be 1,889.28 sq km (4,363.64 sq km – 2,474.36 sq km) and 28,135 persons (94,610 – 66,475) respectively (Exhibit 24). There will be no area or population loss. The percentage of area increase is 76.4% and the percentage of population increase is 42.3%. Therefore, the proposed WYKE-FM facility will serve the public interest by significantly increasing coverage to an area and population that is currently unable to receive services provided by the WYKE-FM facility.

Intermediate Frequency Interference (53rd & 54th Adjacent Channels)

The proposed WYKE-FM site will meet all separation requirements pertaining to intermediate frequency (“IF”) interference. The station with the least geographic spacing margin with respect to distance from the proposed WYKE-FM transmitter site is (282-53=**229** & 282-54=**228**) the licensed WOGK-FM Channel 229 Class C0 facility located approximately 65.2 km from the proposed WYKE-FM transmitter site in Ocala, FL at North Latitude 29° 16' 05" and West Longitude 82° 04' 51" where a separation of 26.5 km is required; therefore, the distance is easily met with a margin of 38.7 km.

FM Blanketing Interference

Blanketing is defined as interference to the reception of other broadcast stations which is caused by the presence of an FM broadcast signal of 115 dBu (562.3 mV/m) or greater signal strength in the area adjacent to the antenna of the transmitting station. The 115 dBu contour is referred to as the blanketing contour and the area within this contour is referred to as the blanketing area. The proposed WYKE-FM Channel 282 blanketing contour extends 1.61 km from its transmitter and it is understood that CCARC must assume full financial responsibility for remedying any new complaints of blanketing interference for a period of one year to all broadcast stations within the proposed WYKE-FM blanketing contour.

Environmental Impact

The proposed WYKE-FM Channel 282 Class C3 facility will have no significant environmental impact as defined in §1.1307 of the FCC Rules. The FM transmitter, transmission line and antenna system will produce a maximum ERP of 19.0 kW (c-pol). It was determined that the maximum lobe of radiation from the base of the tower will occur at approximately 155.2 feet from the base of the tower (397.3 ft radial distance from the antenna center). At approximately 155.2 feet from the base of the tower, the depression angle of the main lobe is approximately 67° below the horizontal. At that point, the relative field is 0.323 and the power density six feet above the ground is approximately 0.00903 mW/cm². This equates to only 0.90% of the Maximum Permissible Exposure (“MPE”) limits for Occupational/Controlled Exposure and only 4.52% of the MPE limits for General Population/Uncontrolled Exposure authorized by the American National Standards Institute (“ANSI”). Since operation of the proposed WYKE-FM Channel 282 facility will not exceed 5.0% of the MPE limit for Occupational/Controlled Exposure or General Population/Uncontrolled Exposure at any point on the ground, the proposed facility is not considered a “significant contributor” to the RF exposure environment pursuant to OET Bulletin 65, Edition 97-01. Therefore, contributions of exposure from other sources were not accounted for in this analysis. It is safe to conclude that the emissions would be insignificant and well within the maximum allowable requirements.

If other antennas are placed on the tower in the future, the licensee will cooperate with those users by reducing or completely terminating the power to the antenna when maintenance workers are in danger from the electromagnetic radiation emanating from the antenna. It is also understood that additional antennas on the support structure could increase the overall RF exposure levels and it is the responsibility of each licensee to ensure that the total RF exposure resulting from the operation of all antennas on the support structure do not exceed the maximum permissible exposure level at any point on the ground.

EXHIBIT 9

Proposed WYKE-FM Distance to Contour (Class C3 Determination)

Call Letters: WYKE-FM (Proposed)

Latitude: 29-01-18 N

Longitude: 082-41-20 W

ERP: 19.00 kW

Channel: 282

Frequency: 104.3 MHz

AMSL Height: 116.26 m

Elevation: 3.0 m

HAAT: 112.0 m

Horiz. Antenna Pattern: Directional

Type of contour: FCC

Location Variability: 50.0 %

Time Variability: 50.0 %

of Radials Calculated: 360

Field Strength: 60.00 dBuV/m

Primary Terrain: 3 Second US Terrain

Bearing (deg)	Distance (km)	HAAT (m)
0.0	39.0	114.2
10.0	38.8	112.4

Terrain database is USGS 03 SEC , R= 73.215 qualifying spacings or FCC minimum Spacings in KM, M= Margin in KM
Contour distances are on direct line to and from reference station. Reference zone= , Co to 3rd adjacent.
Ant Column: (D= DA Standard, Z= DA 73.215, N= Not DA 73.215, _= Omni), Polarization (C, H, V, E), Beamtilt(Y, N, X)
"**"affixed to 'IN' or 'OUT' values = site inside protected contour.
< = Station meets FCC minimum distance spacing for its class.

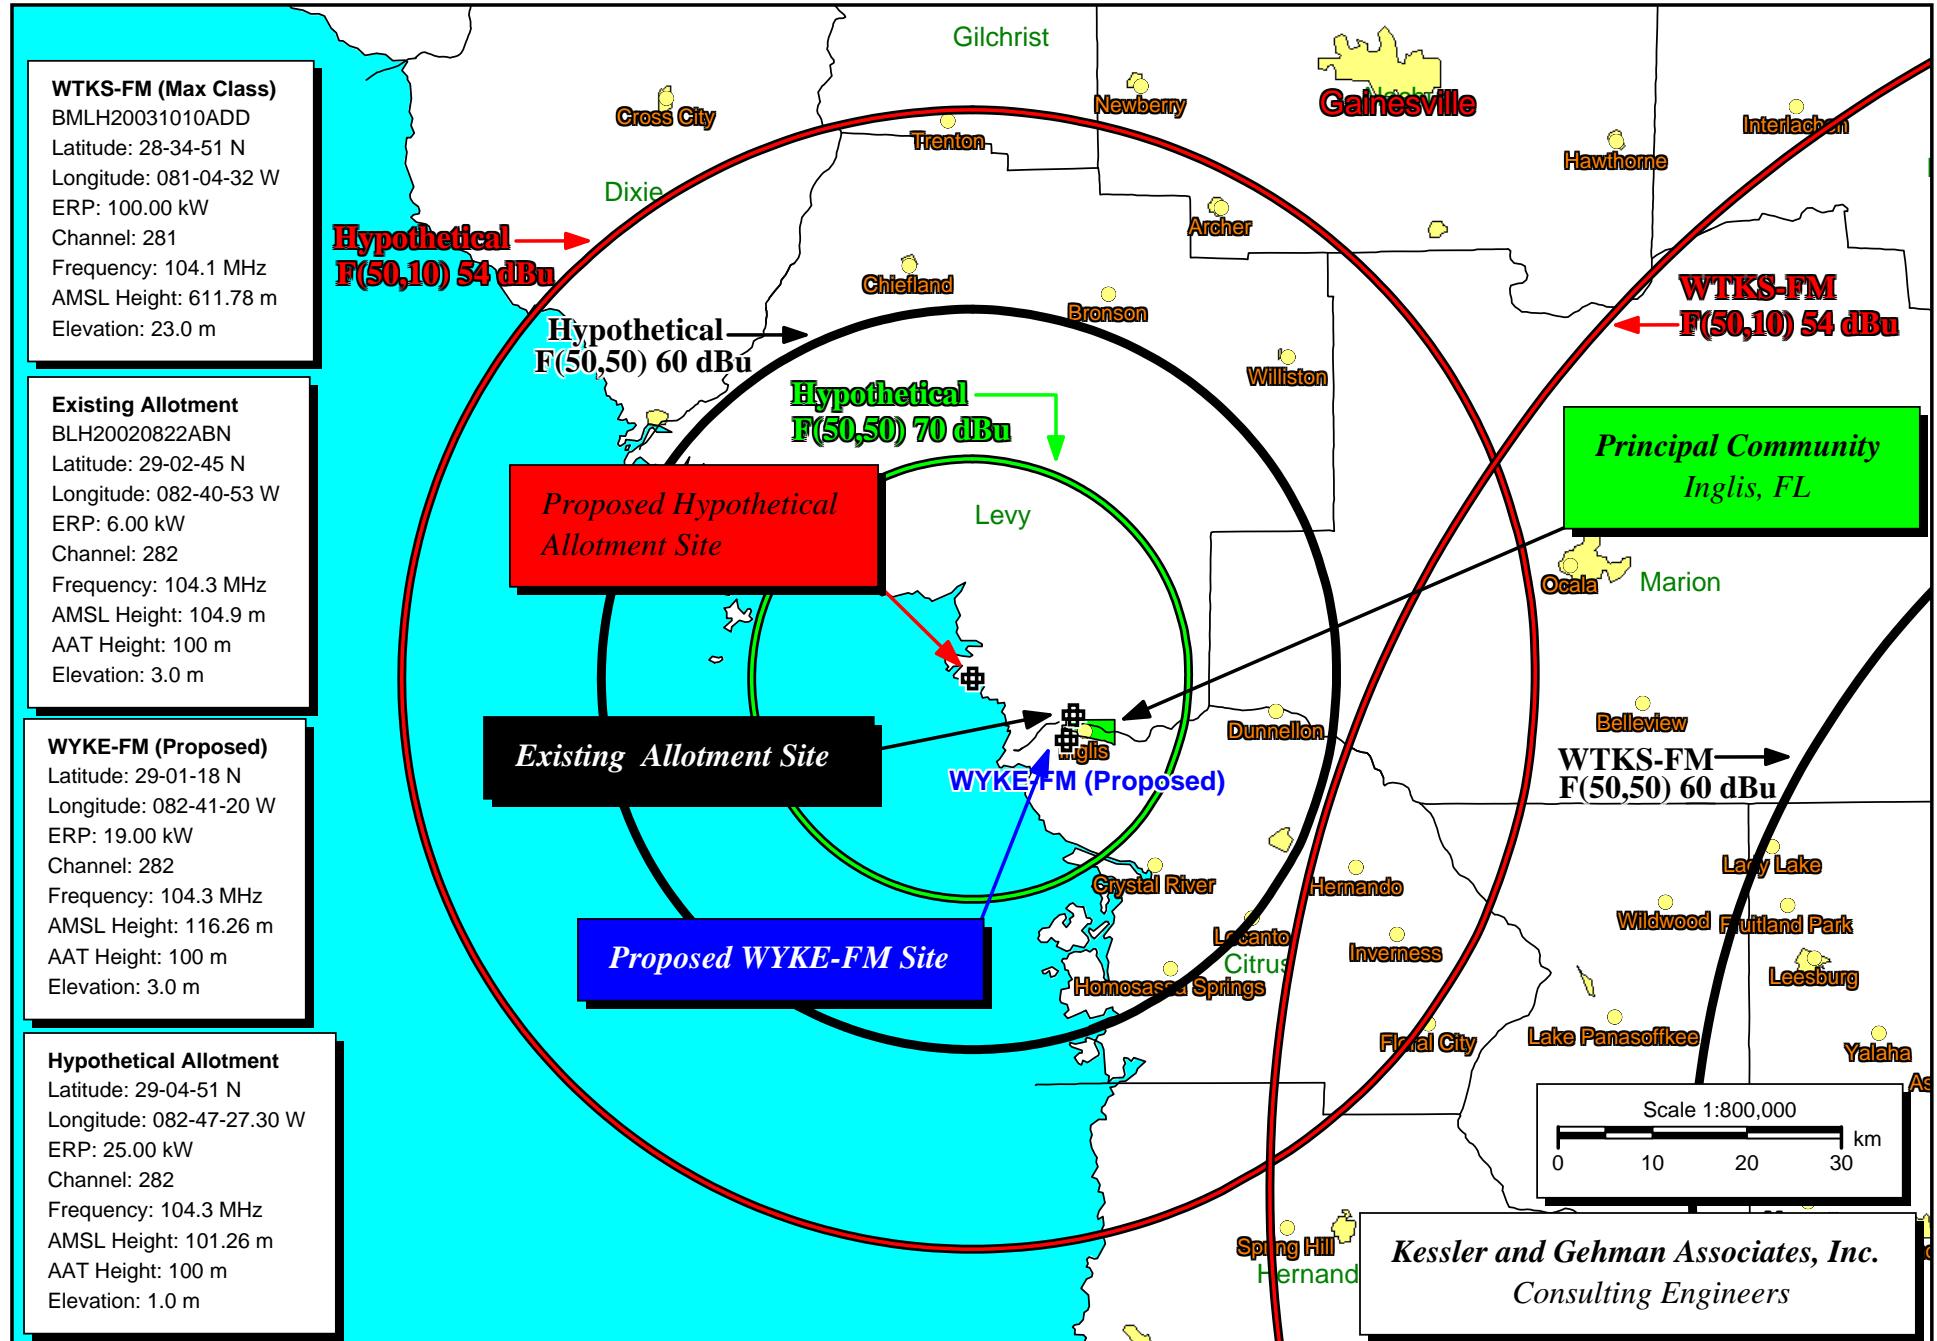

^ = Power and antenna height 'Max classed' as per Sec 73.215 protection requirements

Call Letters: WYKE-FM (Proposed)
Latitude: 29-01-18 N
Longitude: 082-41-20 W
ERP: 19.00 kW
Channel: 282
Frequency: 104.3 MHz
AMSL Height: 116.26 m
Elevation: 3.0 m
HAAT: 112.0 m
Horiz. Antenna Pattern: Directional

Type of contour: FCC
Location Variability: 50.0 %
Time Variability: 10.0 %
of Radials Calculated: 360
Field Strength: 54.00 dBuV/m

Primary Terrain: 3 **Second US Terrain**
