

## INTRODUCTION

This engineering text is being filed on behalf of KTVQ Communications, Inc., licensee of Low Power Television (LPTV) station K07HC, Sheridan, etc., Wyoming in support of its displacement application for Channel 9. The current licensed K07HC facility operates on Channel 7 and is being displaced. Specifically, K07HC is located less than 1 kilometer from and is predicted to cause interference to and receive interference from (and therefore is displaced by), the co-channel TV Channel 7 Construction Permit (FCC File No.BPCT-19960321KF) for KBNM-TV, Sheridan, Wyoming. Therefore, this engineering text supports a change to Channel 9(-) from the same licensed transmission site and the same Radiation Center Above Mean Sea Level (RCAMSL) of the current licensed facility.
