

November 4<sup>th</sup>, 2009

To Whom It May Concern:

SUBJECT: WXNY (Our S/O 27760-B)

On Sunday, November 1<sup>st</sup>, 2009, I performed the inter-modulation tests for WXNY using an Rohde & Schwarz FSH3 Spectrum Analyzer, Serial Number 102776. The measurement was made at the output directional coupler of the combiner system at the 4 Times Square installation with all of the transmitters running at fully licensed power. Our measurements indicated that all spurious emissions were at least 84 dB below carrier level, therefore, the addition of WXNY to the existing combiner system complies with all of the FCC rules and regulations.
