**Request for Replacement Digital Television Translator Station  
Channel 25  
At Waymart, Pennsylvania  
March 10, 2009**

Waymart Wind Farm, LLC (Waymart), is the owner and operator of a wind power generation facility in Wayne County, Pennsylvania. Waymart has constructed and put into operation 43 Wind Turbines along the Moosic Mountains near Waymart, Pennsylvania in Clinton Township within Wayne County, Pennsylvania. Waymart Wind Farm through the various Full Power Television Station licensees requested and was granted Special Temporary Authority (STA) to build and operate a seven channel analog television translator system in 2004 to mitigate the television reception problems of the residents in Clinton Township, Pennsylvania.

This statement and its associated exhibits has been prepared to support a request for a Replacement Digital Television Translator Station to construct and operate a system of seven digital television translator stations at Waymart, Pennsylvania. This system will replace the existing analog translator system currently in operation under Special Temporary Authority (STA).

As each Full Power Digital Television Station that is to be carried on the translator system is independently owned and licensed. Therefore, each translator station and its associated licensee are submitting individual FCC form 346 applications. In the instant application, WYOU-DT (Facility ID # 17010), licensee Mission Broadcasting, Inc., requests authority from the Commission to construct and operate a Replacement Digital Television Translator on channel 25.

Waymart currently operates a seven channel analog translator system under "Special Temporary Authority" (STA). This request seeks to convert the existing analog translators to digital and to license the operation of these translators under the FCC's Replacement Digital Television Translator service to each station's associated Full Power Digital Television Station. Thus, eliminating the need for extension requests of its Analog Television Translator STA's. Waymart plans to "flash-cut" the existing equipment from analog operation to digital operation once authority has been granted by the FCC to do so. The Station's and Waymart wish to convert the translators to Digital Service prior to the June, 2009 cessation of full power analog television.

As Waymart informed the Commission in its previous analog television translator request, reception of television signals in the Clinton Township area is impaired due to the operation of the wind turbines. As noted in its analog translator request, without the translators provided by the Waymart Wind Farm, over-the-air reception of analog and digital signals would be problematic. Consequently, with the end of analog television, the need to convert these translator stations to digital operation is essential.

Without the conversion of this system from analog to digital operation, the residents of Clinton Township will be without over-the-air reception and this condition will create a new “White Space”. Thus, WYOU-DT and Waymart believe that this request is consistent with the Commission’s intent to provide digital service to areas that will lose analog service at the cessation of analog. Further, WYOU-DT and Waymart believe that their request is in the Public Interest and WYOU-DT has agreed to allow carriage of their programs on the requested replacement digital television translator.

The town of Waymart, Pennsylvania and those areas within Clinton Township are terrain shielded from the transmission facility of WYOU-DT. Therefore, these areas would likely not have reliable off-air digital television reception of WYOU-DT even without the impairment created by the wind turbines which block the reception at Waymart.

However, this situation allows the use of terrain shielding to protect other stations and users from interference by the proposed facilities. Longley-Rice studies utilizing the OET-69 methodology were undertaken to determine the available Post-Transition DTV channels to be used at Waymart. By utilizing a directional antenna and limiting the area served by the facility, we believe that this facility may be authorized and provide much-needed digital television service to the residents of Clinton Township without exceeding the *de minimus* interference limits to other stations.

#### **Facility Description:**

The technical parameters for the proposed Replacement Digital Television Translator operation at Waymart, PA are summarized in the “Tech Box” portions of the FCC Form 346, Section III. The facility is proposed to operate on channel 25 with a directional antenna and a maximum effective radiated power (ERP) of 300 Watts, with an antenna height above average terrain (HAAT) of 317 meters.

It is proposed to operate Replacement Digital Television Translators on the seven UHF channels as identified below:

<b>Call Sign / Digital Channel / Network</b>	<b>Proposed DTV Translator Output Channel</b>
WNEP DT / 49/50* / ABC	22
<b>WYOU DT / 13 / CBS</b>	<b>25</b>
WBRE DT / 11 / NBC	28
WSWB DT / 31 / CW	36
WVIA / 41 / PBS	44
WOLF / 45 / Fox	47
WQPX / 32 / Ion	49/50*

\* WNEP was recently granted a Petition for Rulemaking to change its post-transition DTV channel from 49 to 50.

The instant application requests authority for operation on channel 25 for WYOU-DT. The Replacement Digital Television Translator facility will operate with a side-mounted two-panel array on an existing 70-foot (21.3 Meters) tower. This tower is located adjacent to wind turbine # 5 on the Waymart Wind Farm site. Since the antenna structure's overall height above ground is 21.3 meters, and (according to the Commission's TOWAIR computer program) there are no landing areas within 8km, the structure is exempt from notification to the FAA under section 17.7 of the Commission's Rules, and Antenna Structure Registration is not believed to be necessary.

The adjacent existing wind turbine structure is approximately 300 feet (91.5 meters) in height to the tip of the blade. The wind turbines are lighted in accordance with FAA rules and were found to pose no hazard to air navigation when the wind farm was constructed. Thus, the visual impact of the 70 foot existing tower structure is not significant and there should be no impact with regard to FAA.

The transmitting antenna will be a Kathrein Model K723147 two-panel array, which is directional in the horizontal plane. No beam tilt is proposed. The two panels will be oriented at 95 degrees and 165 degrees to accomplish the pattern proposed herein. The transmitters of the stations will be combined using a channel combiner in the transmitter building and the output of the channel combiner will feed the antenna. The maximum ERP (Effective Radiated Power) will be 300 watts, horizontally polarized on each channel. The antenna's horizontal plane pattern, expressed in terms of relative field is supplied in Figure 1. These values should be rotated such that the main lobe (0 degrees) is oriented at 130 degrees relative to True North. Figure 2 provides relative field values for the vertical plane (Elevation) pattern for the proposed antenna. The antenna will be installed in accordance with the manufacturer's instructions. A competent technical representative of the applicant will supervise the installation of the antenna on site.

As depicted in Figure 3, the service contour (51.0 dBu) of the facility does cover the principal community of Waymart, Pennsylvania.

#### **Allocation Situation:**

A study of channel 25 for the post-transition DTV channel to be utilized for the facility is attached. The study was conducted using the FCC's OET-69 Longley-Rice methodology. The study was conducted using 1km cell size. The study was conducted using the "simple" emission mask. A copy of the study is attached at the end of this Statement.

The station is clear of FCC Monitoring facilities, and is also no closer than 9km to any authorized AM station. The nearest AM site is WKJN at 9.66km distant. No adverse impact to WKJN is expected.

#### **Interference Acceptance:**

The applicant agrees, to the extent required, to accept any interference to its proposed operation.

**Environmental Considerations:**

Under section 1.1306 of the Commission's Rules, an environmental impact assessment is not required for this application. The proposal does not specify a location in a designated wilderness area, a wildlife preserve, areas of critical habitats, historic districts Indian Religious site, or flood plain, and will not involve significant change in surface features. Additionally, the tower will not be equipped with any lighting.

The proposed operation was evaluated for human exposure to radiofrequency (RF) energy using the procedures outlined in the Commission's OET Bulletin 65. The proposed antenna will be installed such that its center of radiation is approximately 20 meters above ground level. An ERP of approximately 0.3 kilowatts, horizontally polarized, will be employed. According to the elevation pattern data provided by the antenna manufacturer, the proposed antenna will have a relative field of less than 12 percent from 14 to 30 degrees below the horizontal plane (below the antenna). Thus, the value of 12 percent is used for this calculation. The "uncontrolled/general population" limited specified in section 1.1310 for channel 25 (Center Frequency 539 MHz) is 359.3 microwatts per square centimeter.

Using formulas from OET-65, Supplement A, the proposed facility would contribute a power density of 0.445 microwatts per square centimeter at 2 meters above the ground level, or 0.124% of the uncontrolled/general population limit. Since this is a multiple transmitter location, the entire contribution of all seven emitters should be considered. In this case, it is estimated that the total contribution of all seven emitters would only contribute approximately 3.118 microwatts per square centimeter or less than 0.898% of the uncontrolled/general population limit at the lowest frequency. At locations away from the base of the tower and building the calculated power density is even lower due to the increasing distance away from the antenna. No other non-excluded emitters are located within 2km of the proposed site.

Additionally, the applicant will restrict access to the building and tower areas to prevent unauthorized personnel from accessing the antenna. Further, the applicant will conduct measurements of RF Exposure levels following construction to ensure compliance with applicable RFR standards. The applicant will also develop an RF Exposure safety program for all workers that will be accessing the site. Any time workers will be working on the tower the applicant will cease operations of the transmitters.

Based upon the proceeding, it is believed that this instant proposal may be categorically excluded from environmental processing under section 1.1306 of the Commission's Rules. Therefore, preparation of an Environmental Assessment is not required.

**Certification:**

The undersigned hereby certifies that the foregoing statement was prepared by him or under his direction, and that it is true and correct to the best of his knowledge and belief. Mr. Wallace is a principal in the firm of Meintel, Sgrignoli, & Wallace, LLC and has submitted numerous engineering exhibits to various governmental authorities and the Federal Communications Commission. His qualifications are a matter of record with that agency.

This Statement Prepared on this 10<sup>th</sup> day of March, 2009.
